<tr>
<td>9.0</td>
<td>October 2020</td>
<td>Revision 9.0 is a post-production release of this document published in October 2020. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Added Appendix for Controller, Array, Logical, and Physical Device properties</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf create - Updated parameters, Stripesize and SSD I/O BYPASS</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getconfig - Updated description</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf SETCONTROLLERPARAM - Updated syntax, parameter and examples; included DISCOVERYPROTOCOL and EXPANDERSCANDURATION</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf task - Updated the description for Random Zero and Random Random Zero in 'options' parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Updated syntax of arcconf commands to include an optional parameter &quot;[nologs]&quot;</td>
</tr>
<tr>
<td>8.0</td>
<td>February 2020</td>
<td>Revision 8.0 is a post-production release of this document published in February 2020. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setcontrollerparam - Updated the syntax, parameter and examples of MCTP/PBSI help</td>
</tr>
<tr>
<td>7.0</td>
<td>October 2019</td>
<td>Revision 7.0 is a post-production release of this document published in October 2019. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf romupdate- Updated parameter and examples</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf create- Updated Parameters section</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getstatus- Updated note</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getversion- Updated description</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setperform- Updated syntax, parameters and examples sections</td>
</tr>
<tr>
<td>6.0</td>
<td>February 2019</td>
<td>Revision 6.0 is a post-production release of this document published in March 2019. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getlogs-Updated syntax, parameters and example</td>
</tr>
<tr>
<td>5.0</td>
<td>January 2019</td>
<td>Revision 5.0 is a post-production release of this document published in October 2018. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Added commands:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf consistencycheck- Added PARALLELCOUNT, EVENTNOTIFY, INCONSISTENCYREPAIRPOLICY parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf create-Updated Controller and Array parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf delete-Added maxCache ld parameter and updated ALL</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf expanderupgrade-Updated Mode parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getconfig-Added LD and AR parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf identify-Added MAXCACHE parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf imageupdate-Updated Mode parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf modify-Added EXPAND and SHRINK parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf phyerrorlog-Updated example</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf romupdate-Added ImagePath, toggle and once parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf savesupportarchive-Added parameters GUI and Redfish</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setcache-Added DRIVEWRITECACHEPOLICY, WRITECACHEBYPASSTHRESHOLD and RECOVERCACHEMODULE parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setcontrollerparam-Updated i2CADDRESS parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setmaxcache-Added MAXCACHEWRITEPOLICY</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setstate-Added maxCache ld and SPARETYPE</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf Task-Added start array and start logical drive</td>
</tr>
<tr>
<td>4.0</td>
<td>April 2018</td>
<td>Revision 4.0 is a post-production release of this document published in March 2018. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add commands: maxcrypto, maxcryptoaccounts, maxcryptkey</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf Create-Add ENCODE parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf SetControllerParam-Add MIXEDVOLUMES, FWLOCK parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf Task-Add ENCODE, CRYPTOERASE, REKEY parameters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf SetConfig-Add CLEARMAXCRYPTOCONF parameter</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf GetConfig-Display maxCrypto properties</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add section: Running ARCCONF from the UEFI Shell</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add commands supported in UEFI/ARCCONF only: passthrough, slotconfig</td>
</tr>
<tr>
<td>3.0</td>
<td>September 2017</td>
<td>Revision 3.0 is a post-production release of this document published in September 2017. The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getconfig-Added logical drive maxCache statistics to the list of information provided by this command.</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setarrayparam-Added SSDIOBYPASS to parameter.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setcontrollerparam-Added SANITIZELOCK parameter.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf task-Added CHANNELID# parameter and options for secureerase.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf uart-Removed this command.</td>
</tr>
<tr>
<td>2.0</td>
<td>February 2017</td>
<td>Revision 2.0 is a post-production release of this document published in February 2017.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The following is a summary of the changes:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Downloading the Installation Packages-Removed &quot;.exe&quot; from the Linux command.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf create-Added maxCache support and added RAID levels. Added note to avoid mixing SMR and PMR in an array.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf getconfig-Added display of controller manufacturing information, green backup, associated split mirror array information, and I2C address, clock speed and clock stretching information.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf identify-Added display of logical drive and array.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf modify-Added note to avoid mixing SMR and PMR in an array.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf romupdate-Updated download URL for .bin file.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• arcconf setcontrollerparam- Added I2CADDRESS.</td>
</tr>
<tr>

Software License Agreement

PLEASE READ CAREFULLY: THE USE OF THIS SOFTWARE IS SUBJECT TO THE SOFTWARE LICENSE TERMS OF MICROSEMI, INC. AND OTHER LICENSORS WHOSE SOFTWARE MAY BE BUNDLED WITH THIS PRODUCT.

BY YOUR USE OF THE SOFTWARE INCLUDED WITH THIS PRODUCT YOU AGREE TO THE LICENSE TERMS REQUIRED BY THE LICENSOR OF THAT SOFTWARE, AS SET FORTH DURING THE INSTALLATION PROCESS. IF YOU DO NOT AGREE TO THE LICENSE TERMS APPLICABLE TO THE SOFTWARE, YOU MAY RETURN THE ENTIRE UNUSED PRODUCT FOR A FULL REFUND.

In return for acquiring a license to use the Microsemi software, which may include software from third party licensors and patches made available by Microsemi (“Software”), and the related documentation, you agree to the following terms and conditions:

1. License. This Agreement grants you, the Licensee, a license to:
   a. Use the Software on a single computer system, which is not intended for use by more than five (5) users; and:
   b. Make one copy of the Software in machine readable form solely for back-up purposes, provided you reproduce Microsemi’s copyright proprietary legends. Notwithstanding the foregoing, the Software may be used on the home, laptop or other secondary computer of the principal user of the Software, and an additional copy of the Software may be made to support such use. As used in this license, the Software is “in use” when it is either loaded into RAM or installed on a hard disk or other permanent memory device. The Software may be “in use” on only one computer at any given time. (Different license terms and fees are applicable for networked or multiple user applications.) As a specific condition of this license, you agree to use the Software in compliance with all applicable laws, including copyright laws, and that you will not copy, transmit, perform or distribute any audio or other content using the Software without obtaining all necessary licenses or permissions from the owner of the content.

2. Restrictions. You may not distribute copies of the Software to others or electronically transfer the Software from one computer to another over a network. You may not post or otherwise make available the Software, or any portion thereof, in any form, on the Internet. You may not use the Software in a computer service business, including in time sharing applications. The Software contains trade secrets and, in order to protect them, you may not decompile, reverse engineer, disassemble, or otherwise reduce the Software to a human-perceivable form. YOU MAY NOT MODIFY, ADAPT, TRANSLATE, RENT, LEASE, LOAN, RESELL FOR PROFIT, DISTRIBUTE, NETWORK OR CREATE DERIVATIVE WORKS BASED UPON THE SOFTWARE OR ANY PART THEREOF.

3. Ownership of Software. As Licensee, you own the media upon which the software is recorded or fixed, but Microsemi and its licensors retain title and ownership of the Software recorded on the original media and all subsequent copies of the Software, regardless of the form or media in which or on which the original and other copies may exist. This license is not a sale of the Software or any copy.

4. Confidentiality. You agree to maintain the Software in confidence and that you will not disclose the Software to any third party without the express written consent of Microsemi. You further agree to take all reasonable precautions to preclude access of unauthorized persons to the Software.

5. Term. This license is effective until January 1, 2045, unless terminated earlier. You may terminate the license at any time by destroying the Software (including the related documentation) together with all copies or modifications in any form. Microsemi will have the right to terminate our license immediately if you fail to comply with any term or condition of this Agreement. Upon any termination, including termination by you, you must destroy the Software (including the related documentation), together with all copies or modifications in any form.

6. Special Terms Applicable to Databases. Where a database is included with the Software, you acknowledge that it is licensed only in connection with the use of the Software to perform disc creation, and that the
database and all data derived therefrom must be maintained in confidence in accordance with the provisions of Section 4. This license does not grant you any rights to distribute or disclose such database or data.

7. Limited Warranty. Microsemi and its Licensor warrant only that the media upon which the Software is furnished will be free from defects in material or workmanship under normal use and service for a period of thirty (30) days from the date of delivery to you. MICROSEMI AND ITS LICENSORS DO NOT AND CANNOT WARRANT THE PERFORMANCE OR RESULTS YOU MAY OBTAIN BY USING THE SOFTWARE OR DOCUMENTATION. THE FOREGOING STATES THE SOLE AND EXCLUSIVE REMEDIES MICROSEMI AND ITS LICENSORS WILL PROVIDE FOR BREACH OF WARRANTY. EXCEPT FOR THE FOREGOING LIMITED WARRANTY, MICROSEMI AND ITS LICENSORS MAKE NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED, AS TO NON-INFRINGEMENT OF THIRD PARTY RIGHTS, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow the exclusion of implied warranties or limitations on how long an implied warranty may last, so the above limitations may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

8. The entire liability of Microsemi and its licensors, and your exclusive remedy for a breach of this warranty, shall be:
   a. The replacement of any media not meeting the above limited warranty which is returned to Microsemi; or:
   b. if Microsemi or its distributor is unable to deliver replacement media which is free from defects in materials or workmanship, you may terminate this Agreement by returning the Software and your money will be refunded.

9. Limitation of Liability. IN NO EVENT WILL MICROSEMI OR ITS LICENSORS BE LIABLE TO YOU FOR ANY INCIDENTAL, CONSEQUENTIAL OR INDIRECT DAMAGES, INCLUDING ANY LOST PROFITS, LOST SAVINGS, OR LOSS OF DATA, EVEN IF MICROSEMI OR A LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, OR FOR ANY CLAIM BY ANY OTHER PARTY. Some states do not allow the exclusion or limitation of special, incidental, or consequential damages, so the above limitation or exclusion may not apply to you.

10. Export. You acknowledge that the laws and regulations of the United States and other countries may restrict the export and re-export of the Software. You agree that you will not export or re-export the Software or documentation in any form in violation of applicable United States and foreign law.

11. Government Restricted Rights. The Software is subject to restricted rights as follows. If the Software is acquired under the terms of a GSA contract: use, reproduction or disclosure is subject to the restrictions set forth in the applicable ADP Schedule contract. If the Software is acquired under the terms of a DoD or civilian agency contract, use, duplication or disclosure by the Government is subject to the restrictions of this Agreement in accordance with 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors and 49 C.F.R. 227.7202-1 of the DoD FAR Supplement and its successors.

12. General. You acknowledge that you have read this Agreement, understand it, and that by using the Software you agree to be bound by its terms and conditions. You further agree that it is the complete and exclusive statement of the agreement between Microsemi and you, and supersedes any proposal or prior agreement, oral or written, and any other communication between Microsemi and you relating to the subject matter of this Agreement. No additional or any different terms will be enforceable against Microsemi unless Microsemi gives its express consent, including an express waiver of the terms of this Agreement, in writing signed by an officer of Microsemi. You assume full responsibility for the use of the Software and agree to use the Software legally and responsibly. This Agreement shall be governed by California law, except as to copyright matters, which are covered by Federal law. This Agreement is deemed entered into at Sunnyvale, California by both parties. Should any provision of this Agreement be declared unenforceable in any jurisdiction, then such provision shall be deemed severable from this Agreement and shall not affect the remainder hereof. All rights in the Software not specifically granted in this Agreement are reserved by Microsemi.

Should you have any questions concerning this license, contact:

Appendix A Running ARCCONF in the UEFI Shell ................................................................................................. 48
Appendix B Controller, Array, Logical and Physical Device Properties ................................................................. 51
1  Getting Started with the Command Line Utility

This guide explains how your Microsemi Smart Storage controller supports the use of the ARCCONF command line utility. This utility allows you to:

• Create and delete logical drives
• Encrypt and decrypt logical drive data (if supported by your controller)
• Display configuration settings
• Copy configurations from one computer to another
• Flash new firmware and BIOS onto the controller
• Enable the controller to check the removal and connection of any disk drives
• Provide access to the status and event logs of a controller

**Note:** This guide focuses on using ARCCONF with Adaptec Smart Storage Controllers (SmartRAID/SmartHBA/SmartIOC/SmartROC). For information about using ARCCONF with Microsemi Adaptec Series 8 (legacy) RAID controllers, see the *Microsemi Adaptec RAID Controller Command Line Utility User's Guide* (ESC-2160659).

1.1  Installing the Command Line Utility

Follow the instructions in this section to install ARCCONF on the supported operating systems.

1.1.1  Downloading the Installation Packages

Complete these steps to download the ARCCONF installation package for your operating system(s):

1. Open a browser window, then type `start.microsemi.com` in the address bar.
2. Navigate to your controller product page, then select Storage Manager downloads.
3. Download the ARCCONF Command Line Utility installation package.
4. When the download completes, extract the package contents to the installation directory on your machine (`Program Files` or `/opt`, for instance).
5. On Linux systems, ensure that `arcconf` has 'execute' privilege:

   ```
   chmod arcconf +x
   ```

1.1.2  Installing Remote ARCCONF

Use the following procedure to install Remote ARCCONF on a VMware ESXi system. Remote ARCCONF provides command line support on Windows and Linux Guest OSs.

1. Copy the `arcconf` folder to the remote machine using the Remote Desktop Connection utility (on Windows) or a remote copy utility, such as putty or scp (on Linux).

   **Note:**

   You can also get remote `arcconf` from the maxView™ installation directory in the `esx_arcconf` folder.

2. Run `arcconf` from the installation directory.
1.2 Starting the Command Line Utility

Note: You can run a subset of ARCCONF commands from the UEFI shell. For more information, see Running ARCCONF in the UEFI Shell on page 48.

1. To start ARCCONF, enter one of the following commands:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td><code>&lt;install_dir&gt;\arcconf.exe</code></td>
</tr>
<tr>
<td>Linux</td>
<td><code>/&lt;install_dir&gt;/arcconf</code></td>
</tr>
<tr>
<td>VMware ESXi with Remote ARCCONF</td>
<td><code>/usr/RemoteArcconf/arcconf</code></td>
</tr>
</tbody>
</table>

where Install_dir is the directory where the utility is installed.

2. To see a list of available commands, type ARCCONF at the prompt. For help with a specific command, type ARCCONF `<command_name> help`. 
2 Using the Command Line Utility

This chapter explains how to use the command line utility interactively or in batch mode. With interactive mode, enter commands at the prompt. In batch mode, create scripts and run the script in the appropriate shell, as described in the following table:

<table>
<thead>
<tr>
<th>Environment</th>
<th>Batch File</th>
<th>Run Script</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td>.bat</td>
<td>CMD.EXE</td>
</tr>
<tr>
<td>Linux/Unix</td>
<td>.sh</td>
<td>sh/bash</td>
</tr>
</tbody>
</table>

In either mode, if your command fails, you immediately see an error message of command failed. Other script messages that you can get are command completed successfully, or command aborted.

The return values for each command are the same:

0x00: SUCCESS

0x01: FAILURE - The requested command failed

0x02: ABORT - The command was aborted because parameters failed validation

0x03: INVALID_ARGUMENTS - The arguments are incorrect. (Displays COMMAND help)

0x06: INVALID_CARD_NUM - Unable to find the specified controller ID

To view a list of commands at the command line, type ARCCONF and press Enter.

To access the online help for a specific command, type ARCCONF <command>, then press Enter.
2.1 **ARCCONF Commands**

The following commands are available in ARCCONF for Smart Storage controllers. The commands are described on the following pages, in alphabetical order. In the command descriptions, <> indicates a required parameter and [] indicates an optional parameter.

**Table 2 • ARCCONF Commands for Smart Storage Controllers**

<table>

</tr>
</tbody>
</table>

**Note:** ARCCONF supports commands for other controllers that are not listed in the table above. If you attempt to execute any command not listed in Table 2 • ARCCONF Commands for Smart Storage Controllers on page 4, the firmware returns an error.

---

1. Available on controllers that support maxCrypto Controller-Based Encryption. See the Release Notes for more information.
2.2 arcconf atapassword

Description
Sets or clears the password for SATA drives.

Syntax

ARCCONF ATAPASSWORD <Controller#> SET <new password> <Channel# ID#> [nologs]
ARCCONF ATAPASSWORD <Controller#> CLEAR <current password> <Channel# ID#> [nologs]

Parameters

new password | current password
New password, current password.
Channel/ID
Lists the space-delimited channel number and device number (ID) pairs for each drive on which to set or clear the password.

Examples

ARCCONF ATAPASSWORD 1 SET uR8ryx 0 1
ARCCONF ATAPASSWORD 1 CLEAR uR8ryx 0 1

2.3 arcconf consistencycheck

Description
Toggles the background consistency check modes of the controller.

Syntax

ARCCONF CONSISTENCYCHECK <Controller#> <on [Delay]|off> [noprompt] [nologs]
ARCCONF CONSISTENCYCHECK <Controller#> PARALLELCOUNT <Count> noprompt] [nologs]
ARCCONF CONSISTENCYCHECK <Controller#> EVENTNOTIFY <Enable | Disable> noprompt]
[nologs]
ARCCONF CONSISTENCYCHECK <Controller#> INCONSISTENCYREPAIRPOLICY <Enable |
Disable> noprompt] [nologs]

Parameters

Controller#
Controller number.
On [Delay]
Turns background consistency check on, with optional 1 second–30 second delay period. The delay period sets the controller idle time, after which the consistency check will start. A value of 0 disables the consistency check (effectively the same as setting the parameter to Off). If Delay is unspecified, the consistency check mode is set to HIGH. If Delay is specified, the consistency check mode is set to IDLE for the specified period.
PARALLELCOUNT <Count>
Sets the parallel consistency check count. A value of 1 disables the consistency check.
EVENTNOTIFY <Enable | Disable>

Sets the inconsistency event notification and serial debug message generation setting for mirrored volumes.
The Enable option enables the event notification and serial debug message generation. The Disable option
disables the event notification and serial debug message generation.

INCONSISTENCYREPAIRPOLICY <Enable | Disable>

Sets the inconsistency repair policy for the controller. The Enable option enables the inconsistency repair;
the Disable option disables the inconsistency repair.

Noprompt

Optional parameter that suppresses the confirmation prompt.

Examples

ARCCONF CONSISTENCYCHECK 1 OFF
ARCCONF CONSISTENCYCHECK 1 PARALLELCOUNT 4
ARCCONF CONSISTENCYCHECK 1 EVENTNOTIFY enable
ARCCONF CONSISTENCYCHECK 1 INCONSISTENCYREPAIRPOLICY enable

2.4 arcconf create

Description

Creates a new encrypted or plaintext logical drive and, optionally, enables logical drive read caching, write
 caching. You must provide the channel and device ID of the physical devices.

On redundant logical drives, ARCCONF performs autosynchronization.

Note: Do not mix SMR and PMR drives in an array.

Syntax

ARCCONF CREATE <Controller#> LOGICALDRIVE [Options] <Size> <RAID#> <CHANNEL# ID#> [CHANNEL# ID#] ... [noprompt] [nologs]
ARCCONF CREATE <Controller#> LOGICALDRIVE [Options] <Size> <RAID#> ARRAY <Array#> [noprompt] [nologs]
ARCCONF CREATE <Controller#> LOGICALDRIVE ENCODE <Enable/Disable> USERROLE <userrole> [PASSWORD <password>] [Options] <Size> <RAID#> ARRAY <Array#> [noprompt] [nologs]
ARCCONF CREATE <Controller#> MAXCACHE [Options] DATALD, <LogicalDrive#> <Size> <RAID#> <CHANNEL# ID#> [CHANNEL# ID#] ... [noprompt] [nologs]
ARCCONF CREATE <Controller#> MAXCACHE [Options] DATALD, <LogicalDrive#> <Size> <RAID#> ARRAY <Array#> [noprompt] [nologs]
ARCCONF CREATE <Controller#> RAIDZEROARRAY <Channel# ID#> [Channel# ID#] ... [noprompt] [nologs]

Parameters

Controller#

The controller number.

Logical Drive, maxCache

Indicates a logical drive or maxCache Device, with the following options:

- Stripesize <STRIPE>—Allows the logical drive stripe size to be built. Optional parameters for specifying
  a stripe size. STRIPE is specified in kilobytes 16, 32, 64, 128, 256, 512 and 1024 are supported. The
  default is 256 kB.
- Legs <LEG>—Optional parameters for specifying number of legs. Value is an integer.
  - LEG—Number of legs for RAID level 50 or 60.
• Default—2 legs
• RAID 50—2-16 legs, 3-32 drives/leg, 128 drives max.
• RAID 60—2-16 legs, 4-16 drives/leg, 128 drives max.

• Name <NAME>—Optional parameter for specifying the alias name of a logical device that is displayed in the utilities. Value is a string of up to 64 characters.
• Method <METHOD>—Initialization method for the logical drive. Valid options include: BUILD DEFAULT, DEFAULT.
• LDcache—Sets the cache state for the logical drive:
  ◦ LON—cache on
  ◦ LOFF—cache off
• SSD I/O BYPASS <enable | disable>—Specifies to enable/disable SSD I/O bypass path on an array.
• CacheLineSize <CACHELINESIZE>—Specifies the cache line size in KB for maxCache. Adjusting the cache line size can impact maxCache performance and maximum size supported. The larger cache line size can support the larger maxCache size. The default value for this parameter is 64.
• WCache—Sets the logical drive write cache mode for maxCache devices:
  ◦ WT—write-through disabled
  ◦ WB—write-back enabled
  ◦ WBB—write-back enabled (when protected by battery or flash backup module)

Data Logical Drive #
Specifies the existing data logical drive number to associate with the newly created cache logical device.

Encode <enable/disable>
Creates encrypted or plaintext logical drives, based on the maxCrypto™ status and Mixed Volumes logical device properties (see notes below; see also arcconf maxcrypto on page 17):
• Enable—Creates an encrypted logical drive.
• Disable—Creates a plaintext logical drive.

Note:
1. If maxCrypto status is Disabled, then only plaintext logical drives can be created.
2. If maxCrypto status is Enabled and Mixed Volumes property is Enabled, both encrypted and plaintext logical drives can be created.
3. If maxCrypto status is Enabled and Mixed Volumes property is Disabled, only encrypted logical drives can be created.
4. If maxCrypto status is Enabled, then logical drives are encrypted by default.
5. To create plaintext logical drives, the Encode option must be specified with authentication credentials (Userrole/Password).

Userrole <userrole> [Password <password>]
maxCrypto user-role and password. Valid values are:
• crypto (maxCrypto administrator)
• user (standard user)

Array <Array#>
Array number on which to create the logical drive.
ARRAY <maxCache Array#>
The maxCache array number.

RAIDZEROARRAY
Create arrays from list of physical device(s) specified.
Each array will contain exactly one physical device and one RAID 0 logical device.
Default values will be applied for all logical device(s) created.
SSDOverProvisioningOptimization <enable | disable>
Specifies to initialize solid state drives that support the rapid parity initialization feature.

**Size**
Indicates the size of the logical drive in megabytes. Use MAX to set size to available space. Use MAXMBR to set the size to 2 TB.

**RAID#**
Indicates the RAID level for the new logical drive: 0, 1, 10, 1(ADM), 10(ADM), 50, 60, and 6(ADG) are supported.

*Note:* For a complete list of supported RAID levels for your controller, refer to the product release notes.

**Channel# ID#**
Lists the space-delimited channel number and device number pairs for each device to add to the logical drive.

**Noprompt**
No prompt for confirmation.

**Examples**

```
ARCCONF CREATE 1 LOGICALDRIVE STRIPESIZE 64 MAX 0 1 0 2 0 3 2 NOPROMPT
ARCCONF CREATE 1 LOGICALDRIVE ssdoverprovisioningoptimization enable 1024 0 ARRAY 0

ARCCONF CREATE 1 LOGICALDRIVE 1024 1 ARRAY 0
ARCCONF CREATE 1 LOGICALDRIVE stripesize 16 method build MAX 5 0 0 0 1 0 2
ARCCONF CREATE 1 MAXCACHE WB datalid 0 17000 1 0 0 0 1
ARCCONF CREATE 1 MAXCACHE datalid 0 17000 0 ARRAY 0
ARCCONF CREATE 1 LOGICALDRIVE ENCODE disable USERROLE crypto PASSWORD Abc@1234 MAX 5 0 0 1 0 2
```

### 2.5 `arcconf delete`

**Description**
Deletes a logical drive, an array, or maxCache logical device. All data stored on the logical drive will be lost.

**Syntax**

```
ARCCONF DELETE <Controller#> LOGICALDRIVE <LD#> <LD#> ...|ALL [noprompt] [nologs]
ARCCONF DELETE <Controller#> LOGICALDRIVE ALL [noprompt] [nologs]
ARCCONF DELETE <Controller#> ARRAY <arr#> [noprompt] [nologs]
ARCCONF DELETE <Controller#> ARRAY ALL [noprompt] [nologs]
ARCCONF DELETE <Controller#> MAXCACHE <maxCache ld#> [noprompt] [nologs]
ARCCONF DELETE <Controller#> MAXCACHE ALL [noprompt] [nologs]
```

**Parameters**

**Controller#**
Controller# is the controller number.

**LD#**
LogicalDrive# is the number of the logical drive to be deleted.

**arr#**
Arr# is the number of the array to be deleted.

**maxCache ld#**
MaxCache ld# is the number of the maxCache logical device to be deleted.

**ALL**
Deletes all logical devices on array or maxCache.
Noprompt
Optional parameter that suppresses alert messages.

Examples

ARCCONF DELETE 1 LOGICALDRIVE 1 2 3
ARCCONF DELETE 1 ARRAY 0
ARCCONF DELETE 1 ARRAY ALL

2.6 arcconf driverupdate

Description
Updates the Windows device driver for the controller.

Note: This command is available on Windows systems only.

Syntax

ARCCONF DRIVERUPDATE <DirName> [nologs]

Parameters

DirName
Absolute path to directory containing the Windows driver for the controller.

Nologs
Optional parameter that suppresses log output.

Examples

ARCCONF DRIVERUPDATE C:\WINDOWSALL

2.7 arcconf expanderlist

Description
Returns a list of disk drive expanders on a controller.

Syntax

ARCCONF EXPANDERLIST <Controller#> [nologs]

Parameters

Controller#
Controller number.
2.8 arcconf expanderupgrade

Description

Allows new firmware to be flashed to an enclosure or expander.

Syntax:

ARCCONF EXPANDERUPDATE <Controller#> ENCLOSURE <Connector# Channel# ID#>
[ChunkSize#] <UpgradeType> <Filename> [Mode#] [noprompt] [nologs]

Parameters

Controller#
  Controller number.
Channel#
  Channel number of the device to be updated.
ID#
  Device number of the device to be updated.
Connector#
  Connector number of the device to be updated.
ChunkSize#
  Chunk size, in bytes, to be used to update the firmware. Default is 4096 bytes.
Filename
  Name of the firmware update file.
UpgradeType
  EXPANDER—update the firmware image on the expander or enclosure.
  MFG—update the manufacturing image (BOOT SEEPROM) on the expander or enclosure.
  CPLD—update the CPLD image on the expander or enclosure.
  Note: MFG and CPLD upgrade types are supported on the Microsemi Adaptec AEC-82885T expander only.
Mode#
  The Mode parameter applies to EXPANDER and MFG upgrade types only. Valid values are:
  • 2—download microcode only; requires system reset or power cycle to activate (default).
  • 6—download microcode with offsets and activate.
  • 7—download microcode with offsets, save, and activate.
  • E—download microcode with offsets and defer activation.
  • F—activate deferred microcode. It does not require the filename as an input.

Noprompt
  Optional parameter that suppresses alert messages.
Examples

arcconf EXPANDERUPGRADE 1 ENCLOSURE 2 0 0 1024 EXPANDER C:\FirmwareImage.bin 7
arcconf EXPANDERUPGRADE 1 ENCLOSURE 2 0 0 512 MFG C:\FirmwareImage.rom 6
arcconf EXPANDERUPGRADE 1 ENCLOSURE 2 0 0 256 CPLD C:\CPLDImage.bin noprompt

2.9 arcconf getconfig

Description

Lists the following information:

- Array status, size and member drives
- Controller type, status, World Wide Name (WWN), manufacturing information, and mode
- Cache preservation status: enabled/disabled, % of cache pages preserved
- BIOS, boot block, device driver, and firmware versions
- Logical drive status, RAID level and size
- Logical drive mount points
- RAID 10, 50, 60 segment and group information
- maxCache status, SSD information, and statistics of the maxCache logical drive
- Device type, device ID, presence of PFA
- Physical device state, mount point (for drives with OS partition)
- Enclosure information: fan, power supply, and temperature status
- SGPIO virtual SEP information (virtual enclosure device for SGPIO backplanes)
- Connectors backplane discovery protocol
- Connector/Lane/Phy mapping
- Green backup details
- I2C address, clock speed, and clock stretching status
- maxCrypto properties: status, mode, number of encrypted logical devices, master key configuration, account configuration
- Out-of-Band interface properties

Also displays controller BIOS settings if you do not include a device-type keyword.

Note: When displaying adapter information (AD keyword), the Controller Status field is set to Ok or Not Ok. Its value is set to Not Ok only if:

1. Communication with the controller fails. This occurs when the driver returns an error code after attempting to send a command to the controller.
2. A logical drive was created with a newer version of arcconf. Update to the latest utilities.
3. The controller mode (RAID/Mixed/HBA) is supported by the hardware, but not the firmware. Usually, this means that an older version of arcconf is being used against a newer controller. Update to the latest utilities.

Syntax

ARCCONF GETCONFIG <Controller#> [AD|LD [LD#]| AR[AR#]|PD [Channel# ID# Channel# ID#...]|MC|CN | [AL]] [nologs]

Parameters

Controller#
Controller number

**LD#**
Display information about the specified logical device

**AR#**
Display information about the specified array, including the associated split mirror array, if applicable

**AD/PD/AL...**
- AD—Adapter information only (including maxCrypto properties)
- LD—Logical drive information only
- AR—Array information only
- PD—Physical device information only
- MC—maxCache information only
- CN—Connector information only
- AL—All information
- LD#—Optionally displays information about the specified logical device
- AR#—Optionally displays information about the specified array

**Channel# ID#**
Channel# ID#: The Channel and ID of the physical device to be display.

**Examples**

```
arcconf getconfig 1
Controllers found: 1
```

```
Controller information
```

```
Controller Status                        : Optimal

Survival Mode                              : Enabled
```
2.10 arcconf getlogs

Description

Provides access to event logs including:

- A log of special events that may have occurred (rebuilds, LDMs, and so on)

Syntax

```
ARCCONF GETLOGS <Controller#> <Type1> [tabular] [nologs]
ARCCONF GETLOGS <Controller#> <Type2> [tabular] [nologs]
ARCCONF GETLOGS <Controller#> <Type2> LOGICALDRIVE <LD#> [tabular] [nologs]
ARCCONF GETLOGS <Controller#> DEVICE <clear> <Channel# ID#> [nologs]
ARCCONF GETLOGS <Controller#> DEVICE <clear> ALL [nologs]
```

Parameters

- **Controller#**
  - Controller number.
- **Type1**
  - EVENT—controller event log
- **Type2**
  - STATS—controller statistics data
- **Type3**
  - CACHE—cache statistics data for all or a single logical drive
- **Clear**
  - Clears the error counter for one or all physical drives on a controller.
  - Clear device error counter is not applicable on 'Not Supported' drives.
- **Channel/ID**
  - Channel and number of the physical device on the controller.
- **Tabular**
  - Displays statistics in tabular (vs XML) format.

Examples

```
ARCCONF GETLOGS 1 EVENT tabular
ARCCONF GETLOGS 1 STATS tabular
ARCCONF GETLOGS 1 STATS LOGICALDRIVE 0 tabular
```

2.11 arcconf getsmartstats

Description

Displays SMART statistics for the hard drives and Solid State Drives (SSDs) on a controller.

Syntax

```
ARCCONF GETSMARTSTATS <Controller#> [Tabular] [nologs]
```
Parameters

**Controller#**

Controller number.

**Tabular**

Creates output in tabular format.

Examples

```
ARCCONF GETSMARTSTATS 1
ARCCONF GETSMARTSTATS 1 TABULAR
```

---

### 2.12 arcconf getstatus

**Description**

The GETSTATUS function displays the status of any background task that is currently running. The information includes the type of operation, status, logical drive number and logical drive size (for a logical device), channel ID/device ID (for a physical drive), and percentage of the operation completed.

**Syntax**

```
ARCCONF GETSTATUS <Controller#> [nologs]
```

**Parameters**

**Controller#**

Controller# is the controller number

**Examples**

```
ARCCONF GETSTATUS 1
```

---

### 2.13 arcconf getversion

**Description**

Lists version information for all controllers or a specific controller's software components, including information about the driver and firmware currently running.

**Syntax**

```
ARCCONF GETVERSION [nologs]
ARCCONF GETVERSION <Controller#> [nologs]
```

**Parameters**

**Controller#**

Controller# is the controller number
### 2.14 arcconf identify

#### Description

Identifies a physical device by blinking its LEDs. Also, identifies all the physical devices that are used to create a logical drive, maxCache or array.

#### Syntax

```
ARCCONF IDENTIFY <Controller#> ALL [TIME <BlinkTime>] [STOP] [nologs]
ARCCONF IDENTIFY <Controller#> LOGICALDRIVE <LogicalDrive#> [TIME <BlinkTime>] [nologs]
ARCCONF IDENTIFY <Controller#> DEVICE <Channel# ID#> ... [TIME <BlinkTime>] [nologs]
ARCCONF IDENTIFY <Controller#> ARRAY <Array#> [TIME <BlinkTime>] [nologs]
ARCCONF IDENTIFY <Controller#> MAXCACHE [TIME <BlinkTime>] [nologs]
```

#### Parameters

- **Controller#**  
  Controller number
- **LogicalDrive#**  
  Number of the logical drive to be identified
- **Array#**  
  Array number
- **MAXCACHE**  
  maxCache device to be identified
- **Channel# ID#**  
  Channel number and ID number for the physical device(s) to be identified
- **ALL**  
  Blinks all physical devices on the controller for 1 hour or until the STOP command is issued
- **TIME <BlinkTime>**  
  Time, in seconds, for the LEDs to continue blinking
- **STOP**  
  Stops blinking the device

#### Examples

```
ARCCONF IDENTIFY 1 DEVICE 0 0
ARCCONF IDENTIFY 1 ALL TIME 60
ARCCONF IDENTIFY 1 ALL STOP
ARCCONF IDENTIFY 1 LOGICALDRIVE 0 TIME 60
ARCCONF IDENTIFY 1 LOGICALDRIVE 0
ARCCONF IDENTIFY 1 DEVICE 0 1 TIME 30
ARCCONF IDENTIFY 1 ARRAY 0
```
2.15 arccconf imageupdate

Description

Allows new firmware to be flashed to the hard drive.

Syntax:

ARCCONF IMAGEUPDATE <Controller#> DEVICE <Channel# ID# ChunkSize# Filename> [Mode#] [BufferID#] [noprompt] [nologs]

Parameters

Controller#
Controller number.

Channel#
Channel number of the device to be updated.

ID#
Device number of the device to be updated.

ChunkSize#
Chunk size, in bytes, to be used to update the firmware.

Note: For SATA drives, the chunk size must be a multiple of 512.

Filename
Name of the firmware update file.

Mode#
Firmware update mode. Valid values for physical drives are:

- 3—Download with offsets and save image for immediate and future use
- 7—Download microcode with offsets, save, and activate
- 5—Download microcode in single transfer and activate
- 14(E)—Download microcode in 'ChunkSize' byte chunks, but do not activate
- 239(E+F)—Download microcode in 'ChunkSize' byte chunks and activate

BufferID#
Mandatory for tape drive firmware update.

Noprompt
Optional parameter that suppresses alert messages.

Examples

ARCCONF IMAGEUPDATE 1 DEVICE 0 0 32768 ados.lod 3

2.16 arccconf key

Description

Loads a feature key onto a controller.
Using the Command Line Utility

Syntax

```bash
ARCCONF KEY <Controller#> SET <Key#> [nologs]
```

Parameters

**Controller#**
The controller number.

**Key#**
The key number provided by Microsemi.

Examples

```bash
ARCCONF KEY 1 SET ABCDEFGHIJKLMNOPQRSTUVWX
```

### 2.17 arcconf list

**Description**

Lists all controllers in the system, or the configuration of a specific controller.

**Syntax**

```bash
ARCCONF LIST [Controller#] [nologs]
```

**Parameters**

**Controller#**
The controller number.

**Examples**

```bash
ARCCONF LIST
ARCCONF LIST 1
```

### 2.18 arcconf maxcrypto

**Description**

Configures maxCrypto settings, including:

- maxCrypto master key
- Mode (enable/disable)
- Administrator account credentials
- Support for mixed encrypted/plaintext volumes

Also toggles the maxCrypto mode, encodes/encrypts arrays and logical drives, and shows the maxCrypto certificate.
Syntax

ARCCONF MAXCRYPTO <Controller#> SETUP manual MODE <enable <ACCEPT <yes | no> > | disable> KEYMANAGEMENTMODE local MIXEDVOLUMES <enable | disable> MASTERKEY <masterkeystring> USERROLE crypto [PASSWORD <crypto password>] [nologs]

ARCCONF MAXCRYPTO <Controller#> MODE <enable <ACCEPT <yes | no> > | disable> USERROLE <crypto | user> [PASSWORD <crypto/user password>] [nologs]

ARCCONF MAXCRYPTO <Controller#> ENCODE LOGICALDRIVE <logicaldrive#> DATA <preserve/discard> USERROLE <crypto | user> [PASSWORD <crypto/user password>] [nologs]

ARCCONF MAXCRYPTO <Controller#> ENCODE ARRAY <array#> DATA <preserve/discard> USERROLE <crypto | user> [PASSWORD <crypto/user password>] [nologs]

ARCCONF MAXCRYPTO <Controller#> SHOW certificate [nologs]

Parameters

Controller#
Controller number.

SETUP manual
Enables manual setup; all parameters are required.

MODE <enable <ACCEPT <yes | no> > | disable>
Enables creation of encrypted and plaintext logical devices and allows you to accept the maxCrypto Terms of Use. Valid values are:
- Enable: Authorized users can create encrypted logical devices or plaintext logical devices, based on the value of the MIXEDVOLUMES property.
- Disable: Authorized users can create plaintext (non-encrypted) logical devices only.

KEYMANAGEMENTMODE local
Enables local key management.

MIXEDVOLUMES
Enables mixing of encrypted and plaintext logical devices. Valid values are:
- Enable: Authorized users have the option to create encrypted logical devices or plaintext logical devices.
- Disable: New logical devices will be encrypted, with no option to create plaintext logical devices.

MASTERKEY <masterkeystring>
A 10 to 32 character string, using all printable ASCII characters.

Important: Be sure to record the master key and store in a safe place. Once set, the master key cannot be displayed or recovered, only reset.

USERROLE <userrole> [PASSWORD <password>]
maxCrypto user role and password. Valid values are:
- crypto (maxCrypto administrator)
- user (standard user)

The password is a 8-16 character string, comprising all printable ASCII characters. It must include at least one uppercase character, one lowercase character, one numeric, and one special character (#,!,@,...). If password is not entered on the command line, a prompt appears during command execution.

ENCODE
Encrypts an existing array or logical drive, based on the maxCrypto mode and MIXEDVOLUMES property.

DATA <preserve | discard>
Preserves or discards original data in encoded logical device.

SHOW certificate
Displays the maxCrypto Terms of Use certificate.

Examples

ARCCONF MAXCRYPTO 1 SETUP manual MODE enable ACCEPT yes KEYMANAGEMENTMODE local MIXEDVOLUMES enable MASTERKEY xxxxxx USERROLE crypto PASSWORD xxxxxx
ARCCONF MAXCRYPTO 1 SETUP manual MODE enable KEYMANAGEMENTMODE local MIXEDVOLUMES enable MASTERKEY xxxxxx USERROLE crypto password xxxxxx
ARCCONF MAXCRYPTO 1 MODE disable USERROLE crypto PASSWORD xxxxxx

2.19 arcconf maxcryptoaccounts

Description

Creates a maxCrypto standard user (non-administrator) account, sets password recovery question/answer, changes passwords, and recovers passwords.

Syntax

ARCCONF MAXCRYPTOACCOUNTS <Controller#> CREATEUSER [CRYPTOPASSWORD <crypto password> USERPASSWORD <user password>] [nologs]
ARCCONF MAXCRYPTOACCOUNTS <Controller#> CHANGEPASSWORD USERROLE <crypto | user> [OLDPASSWORD <crypto/user password> NEWPASSWORD <crypto/user password>] [nologs]
ARCCONF MAXCRYPTOACCOUNTS <Controller#> SETRECOVERYPARAM QUESTION <"Question"> ANSWER <"Answer"> USERROLE crypto [PASSWORD <crypto password>] [nologs]
ARCCONF MAXCRYPTOACCOUNTS <Controller#> RECOVERPASSWORD ANSWER <"Answer"> USERROLE crypto [NEWPASSWORD <crypto password>] [nologs]
ARCCONF MAXCRYPTOACCOUNTS <Controller#> RECOVERPASSWORD SHOW question [nologs]

Parameters

Controller#

Controller number.

CREATEUSER

Creates a standard user account, using the maxCrypto Administrator account (crypto).

Note: The standard user account is limited to lock/unlock firmware update; see arcconf setcontrollerparam on page 34.

CRYPTOPASSWORD <crypto password>

maxCrypto Administrator account (crypto) password. If crypto password is not entered on the command line, a prompt appears during command execution.

USERPASSWORD <user password>

maxCrypto standard account (user) password. The password is a 8-16 character string, comprising all printable ASCII characters. It must include at least one uppercase character, one lowercase character, one numeric, and one special character (#,@,...). If user password is not entered on the command line, a prompt appears during command execution.

CHANGEPASSWORD

Changes the password for the standard user or crypto (Administrator) account.

USERROLE <crypto | user>

The account type: crypto (Administrator) or user (standard user).

OLDPASSWORD <crypto/user password> NEWPASSWORD <crypto/user password>
The old password and new password for the crypto account or user account. The password is a 8-16 character string, comprising all printable ASCII characters. It must include at least one uppercase character, one lowercase character, one numeric, and one special character (#,!,@,...). If the password is not entered on the command line, a prompt appears during command execution.

**SETRECOVERYPARAM QUESTION <"Question"> ANSWER <"Answer">**

Sets the password recovery question and answer for the crypto (Administrator) account. The question and answer must be enclosed in quotes.

**RECOVERPASSWORD ANSWER <"Answer"> [NEWPASSWORD <crypto password>]**

Answers the recovery question and sets the new password for the crypto (Administrator) account. If the password is not entered on the command line, a prompt appears during command execution.

**RECOVERPASSWORD SHOW question**

Shows the recovery question.

**Examples**

```
ARCCONF MAXCRYPTOACCOUNTS 1 CHANGEPASSWORD USERROLE crypto OLDPASSWORD Abc@1234 NEWPASSWORD Abc@123456
ARCCONF MAXCRYPTOACCOUNTS 1 CREATEUSER CRYPTOPASSWORD Abc@1234 USERPASSWORD Abc@123456
ARCCONF MAXCRYPTOACCOUNTS 1 SETRECOVERYPARAM QUESTION "Which planet are you from?" ANSWER "i am from planet earth" USERROLE crypto PASSWORD Abc123456
```

### 2.20 arcconf maxcryptokey

**Description**

Performs maxCrypto key management functions, including changing the master key, generating a new key for an encrypted array or logical drive, and importing a master key for a logical drive moved from another controller (allows the controller to access the encrypted data).

**Syntax**

```
ARCCONF MAXCRYPTOKEY <Controller#> CHANGEMASTERKEY <masterkey> USERROLE <crypto | user> [PASSWORD <crypto/user password>]
[import_masterkey]
ARCCONF MAXCRYPTOKEY <Controller#> REKEY ARRAY <array#> USERROLE <crypto | user> [PASSWORD <crypto/user password>]
ARCCONF MAXCRYPTOKEY <Controller#> REKEY LOGICALDRIVE <logicaldrive# | ALL> USERROLE <crypto | user> [PASSWORD <crypto/user password>]
ARCCONF MAXCRYPTOKEY <Controller#> IMPORT MASTERKEY <masterkey> USERROLE <crypto | user> [PASSWORD <crypto/user password>]
```

**Parameters**

- **Controller#**
  - Controller number.
- **CHANGEMASTERKEY**<masterkeystring>
  - A 10 to 32 character string, using all printable ASCII characters.
  - **Important**: Be sure to record the new master key and store in a safe place. Once set, the master key cannot be displayed or recovered, only reset.
- **IMPORT MASTERKEY**<masterkeystring>
  - Imports the master key for a logical drive moved from another controller. The master key is a 10 to 32 character string, using all printable ASCII characters.
REKEY
Generates a new key for an encrypted array or logical drive.

USERROLE <crypto | user> [PASSWORD <crypto/user password>]

maxCrypto user role: crypto (Administrator) or user (standard account), with optional password. If password is not entered on the command line, a prompt appears during command execution.

Examples

ARCCONF MAXCRYPTOKEY 1 CHANGEMASTERKEY Abc@1234567 USERROLE crypto PASSWORD Abc@123456
ARCCONF MAXCRYPTOKEY 1 REKEY ARRAY 0 USERROLE crypto PASSWORD Abc@123456

2.21 arcconf modify

Description
Morphs a logical device from one RAID level to another (RAID Level Migration). Expands a logical device from original size to one with larger capacity (Online Capacity Expansion).

Expands, shrinks or moves an array, or moves a logical device to a new array.

Note: Do not mix SMR and PMR in an array.

Syntax

ARCCONF MODIFY <Controller#> FROM <LogicalDrive#> TO [Options] <Size> <RAID#> <CHANNEL# ID#> [CHANNEL# ID#] ... [noprompt] [nologs]

ARCCONF MODIFY <Controller#> ARRAY <Array#> MOVE <Channel# ID#> [Channel# ID#] ... [nologs]
ARCCONF MODIFY <Controller#> ARRAY <Array#> HEAL <Channel# ID#> [Channel# ID#] ... [nologs]
ARCCONF MODIFY <Controller#> LOGICALDRIVE <LD#> MOVEARRAY <Array#> [nologs]
ARCCONF MODIFY <Controller#> LOGICALDRIVE <LD#> NEWARRAY <Channel# ID#> [Channel# ID#] ... [nologs]
ARCCONF MODIFY <Controller#> ARRAY <Array#> EXPAND [modifyparitygroups] [Channel# ID#] [Channel# ID#] ... [nologs]
ARCCONF MODIFY <Controller#> ARRAY <Array#> SHRINK [modifyparitygroups] [Channel# ID#] [Channel# ID#] ... [nologs]

Parameters

Controller#
The controller number

LogicalDrive#
The logical drive number to be modified

Array#
The array ID of the array to be modified

Options
One of the following:

- Stripesize <size>—indicates the stripe size in KB. Options are 16, 32, 64, 128, 256, 512, and 1024. the default is 256KB.

Size
- Size in MB.
• MAX indicates that you want to use all available space on the disk.

**RAID#**
RAID level for the logical drive: 0, 1, 10, 50 and 60 are supported.

**Channel# ID#**
Channel number and device ID for the device

**Note:** The CHANNEL# and ID# parameters are the list of devices that will contain the target modification object. Channel and ID are repeatable parameters. For RAID 1 to Simple Volume migration, CHANNEL# and ID# parameters are ignored.

**MOVE**
Moves an array to a new set of physical devices. Number of new physical devices must equal the number of physical devices in the original array.

**EXPAND**
Expands an array by adding physical device(s) to it. Only the physical device(s) that need to be added should be specified.

**SHRINK**
Shrinks an array by removing physical device(s) from it. Only physical device(s) that need to be removed should be specified.

**HEAL**
Replaces failed physical devices in the array with the specified devices

**MOVEARRAY**
Moves a logical device to an existing array

**NEWARRAY**
Moves a logical device to a new array created with the specified physical devices

**modifyparitygroups**
Reconfigures the logical device(s) parity groups based on the final number of physical devices in the array

**noprompt**
Suppresses the user prompt

**Examples**

```
ARCCONF MODIFY 1 FROM 2 TO 2048 0 0 123 0 124 0 117
ARCCONF MODIFY 1 ARRAY 1 MOVE 0 2 0 3
ARCCONF MODIFY 1 ARRAY 1 HEAL 0 0 0 1
ARCCONF MODIFY 1 LOGICALDRIVE 0 MOVEARRAY 1
ARCCONF MODIFY 1 LOGICALDRIVE 0 NEWARRAY 0 4 0 5
ARCCONF MODIFY 1 ARRAY 1 EXPAND 0 0 0 1
ARCCONF MODIFY 1 ARRAY 1 SHRINK 0 0 0 1
ARCCONF MODIFY 1 ARRAY 1 SHRINK MODIFYPARITYGROUPS 0 0 0 1
```

## 2.22 arcconf passthrough

**Description**
Sends a passthrough SCSI command. The CDB bytes are enclosed in square brackets, hex encoded, space-delimited, and must number 6, 10, 12, or 16 bytes. Read data may be redirected to a file. Write data is taken from the specified file. Transfers are limited to 2048 bytes. Transfer lengths are inferred for common SCSI CDBs but may be overridden using the length parameter.
Syntax

ARCCONF PASSTHROUGH <Controller#> <Channel# ID#> <read|notransfer> [length] 
<]> <CDB> <[> [rawhex] [noprompt] [nologs] 
ARCCONF PASSTHROUGH <Controller#> <Channel# ID#> <readwithsense|notransferwithsense> [length] <[> <CDB> <]> [rawhex] [noprompt] 
[nologs] 
ARCCONF PASSTHROUGH <Controller#> <Channel# ID#> <write> [length] <[> <CDB> 
<]> <Filename> [rawhex] [noprompt] [nologs] 
ARCCONF PASSTHROUGH <Controller#> <Channel# ID#> <writewithsense> [length] <[> 
<CDB> <]> <Filename> [rawhex] [noprompt] [nologs] 
ARCCONF PASSTHROUGH <Controller#> <Channel# ID#1-ID#2> <read> [length] <[> 
<CDB> <]> [rawhex] [noprompt] [nologs] 
ARCCONF PASSTHROUGH <Controller#> <Channel# ID#1, ID#2, #ID#3> <read> [length] 
<[> <CDB> <]> [rawhex] [noprompt] [nologs]

Parameters

CDB

SCSI Command Descriptor Block. The CDB bytes are enclosed in square brackets, hex encoded, 
space-delimited, and must be 6, 10, 12, or 16 bytes.

length

Read/write data buffer length.

Read

Command direction is read.

Write

Command direction is write.

notransfer

No command direction (No data to read/write from/to the device).

readwithsense

Command direction is read with sense data.

writewithsense

Command direction is write with sense data.

notransferwithsense

Read only the sense data.

rawhex

Displays Hex data only of the Passthrough response.

Controller#

The controller through which the passthrough CDB is to be sent.

Channel# ID#

The channel and ID of the physical device.

FileName

Write the CDB data input file.

noprompt

Suppress alert messages.

nologs

Suppress log output.
### Supported Commands

Refer to the SCSI primary/block command specification for command format for each of the following commands.

**Table 3 • Passthrough CDB Commands**

<table>

2.23 **arcconf phyerrorlog**

**Description**
Displays PHY error logs for physical devices on a controller.

**Syntax**

```
ARCCONF PHYERRORLOG <Controller#> DEVICE <Channel# ID#> [nologs]
ARCCONF PHYERRORLOG <Controller#> DEVICE ALL [nologs]
```

**Parameters**

**Controller#**
Controller number.

**Channel/ID**
Channel and number of the physical device on the controller.

**ALL**
Displays PHY error log for all physical devices.

**Examples**

```
ARCCONF PHYERRORLOG 1 DEVICE 0 0
ARCCONF PHYERRORLOG 1 DEVICE ALL
```

2.24 **arcconf playconfig**

**Description**
Configures a controller using a XML server template file produced by the SAVECONFIG command (see `arcconf saveconfig` on page 28). Use this command to deploy the same controller configuration on multiple servers in your storage space.

**Note:**

1. The XML server template file (default, saveconfig.xml) is editable. For example, you may need to change the disk drive capacity, logical drive size, or RAID level.

2. Drives from the same vendor with slightly different capacities (147GB vs 150GB, for instance) are considered interchangeable. If the interchange results in a change in logical drive capacity, the drive is scaled, as needed. For example, if the new drives have 4% more capacity due to vendor or model changes, then all logical drives are increased in size by 4%.

3. Be sure to check the log file to verify that the controller was configured successfully. The exit codes, shown below, indicate the success or failure of the operation and if the system needs to be rebooted.

<table>
<thead>
<tr>
<th>Code</th>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUCCESS</td>
<td>0</td>
<td>Configuration succeeded, no reboot is required.</td>
</tr>
<tr>
<td>FAILURE_GENERAL</td>
<td>1</td>
<td>An error occurred and the configuration could not be completed.</td>
</tr>
</tbody>
</table>
### Syntax

```plaintext
ARCCONF PLAYCONFIG <Input XML File> [LogFile] [FORCE ALL|LOGICALSIZE] [SLOTID][nologs]
```

### Parameters

**Input XML File**
- The pathname of the server template file. The default server template file is available at C:\PMCS\Logs\saveconfig.xml.

**LogFile**
- Sets the pathname of the error log file. By default, the error log is available at C:\PMCS\Logs\playconfig.log.

**FORCE**
- Forces deployment of the server even if the controller does not support all features, or the drive capacity does not match the configuration in the input XML file. Use FORCE ALL to force deployment of all features; use FORCE LOGICALSIZE to force deployment of just the logical drives.

**SLOTID**
- Apply the configuration based on Slot ID instead of Device ID.

### Examples

```plaintext
ARCCONF PLAYCONFIG server1_config.xml playconfig.log FORCE ALL
```

### 2.25 arcconf rescan

#### Description

Enables the controller to check for the removal of any disk drives and to check for the connection of any new disk drives to the controller. Controller rescan runs in the background, asynchronously. When rescan is started, a message is displayed stating that the process is running in the background and may take 10 minutes to complete. Another message is displayed if a rescan is started while one is already in progress.

#### Syntax

```plaintext
ARCCONF RESCAN <Controller#> [nologs]
ARCCONF RESCAN ALL [nologs]
```

#### Parameters

**Controller#**
- The controller number

**ALL**
- Rescans all controllers in the system
Examples

ARCCONF RESCAN 1
ARCCONF RESCAN ALL

2.26 arcconf resetstatisticscounters

Description

Resets statistics counters for a controller and the logical and physical devices attached to it. Use this command to clear the counters and create fresh statistics, including (but not limited to):

- Read/Write Request Count
- Sectors Read/Written/Flushed
- Unaligned Reads/Writes
- Avg/Max Request Latency
- Max Queue Depth
- Max Request Latency
- Avg Dirty Cache Lines
- Avg Free Processor Ram
- Avg Locked Stripes
- Command Count

Syntax

ARCCONF RESETSTATISTICS COUNTERS <Controller#> [nologs]

Parameters

Controller#
The controller number

Examples

ARCCONF RESETSTATISTICS COUNTERS 1

2.27 arcconf romupdate

Description

Allows new firmware and BIOS to be flashed to the controller. A reboot is required for the new firmware to take effect.

Note:
1. This command is supported on all OSs that support maxView Storage Manager.
Using the Command Line Utility

Syntax

ARCCONF ROMUPDATE <Controller#> <ImagePath> [once] [noprompt] [nologs]
ARCCONF ROMUPDATE 1 toggle [noprompt] [nologs]

Parameters

Controller#  
The controller number.

ImagePath  
This is the full path of the ROM image file.

toggle  
Toggles active ROM image to backup ROM image.

once*  
If specified, only the active ROM is flashed with the new image.

Note:
When updating the controller firmware, it is recommended not to add this parameter so that both the active and backup ROM images will be flashed.

Noprompt  
An optional parameter that suppresses the confirmation prompt.

Examples

ARCCONF ROMUPDATE 1 C:\firmwareImage\SmartFW.bin noprompt
ARCCONF ROMUPDATE 1 toggle
ARCCONF ROMUPDATE 1 C:\firmwareImage\SmartFW.bin once

2.28  arcconf saveconfig

Description

Note:  This command is supported on all OSs that support maxView Storage Manager.

Saves the controller configuration to a XML server template file, including the controller type, operational settings, physical drive size, logical drive size, RAID level, and more. Use this file with the PLAYCONFIG command to deploy the same controller configuration to other servers in your storage space; see arcconf playconfig on page 25 for more information.

Note:  Be sure to check the log file to verify that the configuration XML file was created successfully. The exit codes, shown below, indicate the success or failure of the operation.

<table>
<thead>
<tr>
<th>Code</th>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUCCESS</td>
<td>0</td>
<td>Configuration XML generated successfully.</td>
</tr>
<tr>
<td>FAILURE_GENERAL</td>
<td>1</td>
<td>An error occurred and the configuration XML could not be generated.</td>
</tr>
</tbody>
</table>

Syntax

ARCCONF SAVECONFIG [Input XML File] [LogFile] [nologs]
Parameters

**Input XML File**
The pathname of the server template file. The default name (if you omit this parameter) is C:\PMCS\Logs\saveconfig.xml.

**LogFile**
The pathname of the error log file. By default, the error log is available at C:\PMCS\Logs\saveconfig.log.

Examples

ARCCONF SAVECONFIG server1_config.xml C:\LOGS\SERVER1.LOG

2.29 arcconf savesupportarchive

**Description**
Saves configuration and status information to help diagnose a problem with your system. Saved information includes device logs, drive logs, event logs, error logs, controller logs, history logs, basecode logs, and SMART statistics.

By default, the log files are saved in the Support folder in the standard logs directory for your operating system (/var/log for Linux, and so on).

**Syntax**

ARCCONF SAVESUPPORTARCHIVE [Path] [Firmware|Arcconf|Storlib|Basecode|GUI|Redfish] [nologs]

**Parameters**

**Path**
Path to store the log files.

**Log type:**
One of these options:

- Firmware: saves Firmware logs
- Arcconf: saves Arcconf logs
- Storlib: saves StorLib logs
- Basecode: saves basecode logs
- GUI: saves GUI logs
- Redfish: saves Redfish logs

**Examples**

ARCCONF SAVESUPPORTARCHIVE
ARCCONF SAVESUPPORTARCHIVE Firmware
2.30  arcconf setarrayparam

Description
Changes a parameter of an array.

Syntax

ARCCONF SETARRAYPARAM <Controller#> <Array#> SPARETYPE <Type> [nologs]
ARCCONF SETARRAYPARAM <Controller#> <Array#> SSDIOBYPASS <enable/disable> [nologs]

Parameters

Controller#
Controller number

Array#
Array number to be modified

SPARETYPE
Sets the spare type for the array:
• 1: Dedicated—A spare that replaces a failed drive in the array, and is shareable between arrays.
• 2: Autoreplace—A spare that replaces a failed drive in the array, and is not shareable between arrays.

SSDIOBYPASS
Enables or disables I/O bypass for all logical devices in the array. Default is enabled.
• 1: Enable—I/O bypass on array will be enabled.
• 2 : Disable—I/O bypass on array will be disabled.

Examples

ARCCONF SETARRAYPARAM 1 0 SPARETYPE 1
ARCCONF SETARRAYPARAM 1 0 CONSOLIDATESPACE
ARCCONF SETARRAYPARAM 1 0 SSDIOBYPASS enable

2.31  arcconf setboot

Description
Sets the controller as a boot device for the system. This command is available only when the controller is offline.

Syntax

ARCCONF SETBOOT <Controller#> LOGICALDRIVE <LogicalDrive#> [TYPE <Boot Type>] [nologs]
ARCCONF SETBOOT <Controller#> DEVICE <Channel# ID#> TYPE <Boot Type> [nologs]
ARCCONF SETBOOT <Controller#> ENABLE [nologs]

Parameters

Controller#
Controller number

**LogicalDrive#**
Logical drive number to mark as the boot device

**Channel# ID#**
Channel and ID of the physical device to mark as the boot device

**TYPE <Boot Type>**
Boot type of the logical or physical device:
- Primary - Primary boot logical/physical device
- Secondary - Secondary boot logical/physical device
- None - Non-bootable

**ENABLE**
Sets the controller as a boot controller

**Examples**

```
ARCCONF SETBOOT 1 LOGICALDRIVE 0 TYPE primary
ARCCONF SETBOOT 1 DEVICE 0 5 TYPE secondary
ARCCONF SETBOOT 1 ENABLE
```

### 2.32 arccconf setcache

**Description**
Changes the cache mode for a logical drive, or the write cache mode for all drives or a single physical drive on a controller.

**Syntax**

```
ARCCONF SETCACHE <Controller#> LOGICALDRIVE <LogicalDrive#> <logical mode> [noprompt] [nologs]
ARCCONF SETCACHE <Controller#> DRIVEWRITECACHEPOLICY <DriveType> <CachePolicy> [noprompt] [nologs]
ARCCONF SETCACHE <Controller#> CACHERATIO <read#> <write#> [nologs]
ARCCONF SETCACHE <Controller#> WAITFORCACHEROOM <enable | disable> [nologs]
ARCCONF SETCACHE <Controller#> NOBATTERYWRITECACHE <enable | disable> [nologs]
ARCCONF SETCACHE <Controller#> WRITECACHEBYPASSTHRESHOLD <threshold size> [nologs]
ARCCONF SETCACHE <Controller#> RECOVERCACHEMODULE [nologs]
```

**Parameters**

**Controller#**
The controller number

**LogicalDrive#**
The number of the logical drive whose cache will be altered

**Logical mode**
Logical drive cache mode:
- con—cache enabled
- coff—cache disabled

**Channel/ID**
Lists the space-delimited channel number and device number pairs for each device.

**DRIVETYPE**
- Configured—drive write cache policy for configured drives
- Unconfigured—drive write cache policy for unconfigured drives
**CachePolicy**
Write cache policy setting; choose any of the following values
- 0-default
- 1-enable
- 2-disable

**CACHERATIO <read#> <write#>**
Sets the cache ratio for the controller:
- read#—read cache percentage
- write#—write cache percentage

**WAITFORCACHEROOM**
Wait for room in the read/write cache when full instead of automatically bypassing it in favor of higher performance. Enabling this feature prevents RAID 1 inconsistencies that occur whenever the host changes buffer contents during write operations.
- Enable—wait for room in the read/write cache
- Disable—do not wait for room in the read/write cache

**NOBATTERYWRITECACHE**
Enables write caching when a battery or supercapacitor is not present or fully charged. This setting applies to all logical drives on the controller; at least one logical drive must exist before usage.
- Enable—enable write caching on controller without fully charged battery or supercapacitor
- Disable—disable write caching on controller without fully charged battery or supercapacitor

**Caution:** Enabling write caching without a fully charged battery/supercapacitor may cause data loss in the event of a power failure.

**WRITECACHEBYPASSTHRESHOLD**
Sets the write cache bypass threshold for the controller. This allows you to choose a value to bypass the cache when the large write reaches that threshold. Units are in KB and the value must be a multiple of 16 KB. The target can be any valid controller.
- Threshold size—the valid threshold size is between 16 KB and 1040 KB.

**RECOVERCACHEMODULE**
Recovers the failed cache module.

**Examples**

```
ARCCONF SETCACHE 1 CACHERATIO 60 40
ARCCONF SETCACHE 1 WAITFORCACHEROOM enable
ARCCONF SETCACHE 1 NOBATTERYWRITECACHE enable
ARCCONF SETCACHE 1 DRIVEWRITECACHEPOLICY Configured 0 Unconfigured 1 hba 2
ARCCONF SETCACHE 1 WRITECACHEBYPASSTHRESHOLD 1040
ARCCONF SETCACHE 1 RECOVERCACHEMODULE
```

### 2.33 arcconf setconfig

**Description**
Resets the controller configuration. Logical drives are deleted, hard disks are reset to the READY state, cache contents are lost, and controller settings are reset to default values. Optionally, you can clear the maxCrypto configuration, including all keys, passwords, and maxCrypto users (administrator and standard user).
Syntax

```
SETCONFIG <Controller#> DEFAULT | CLEARMAXCRYPTOCONFIG [noprompt] [nologs]
```

**Parameters**

**Controller#**
The controller number

**Default**
Restores the controller's default configuration.

**Clearmaxcryptoconfig**
Restores the default maxCrypto configuration.

**Noprompt**
No prompt for confirmation.

**Examples**

```
ARCCONF SETCONFIG 1 DEFAULT
ARCCONF SETCONFIG 1 CLEARMAXCRYPTOCONFIG
```

### 2.34 arcconf setconnectormode

**Description**

Use this command to configure controller connectors to different operating modes:

- **HBA Mode**—Allows the connector to act and be used as a Host Bus Adapter. RAID functions of the controller are disabled. All attached drives are surfaced as RAW devices.
- **RAID: Hide RAW**—All RAID functions of the controller are enabled for the connector, but RAW devices are not exposed to the operating system.
- **Mixed**—RAID volumes and RAW drives on the connector are exposed to operating system.

**Syntax:**

```
ARCCONF SETCONNECTORMODE <Controller#> <Connector #> <Functional Mode#> <Connector #> <Functional Mode#> ... [noprompt] [nologs]
```

**Parameters**

**Controller#**
Controller number.

**Connector#**
Connector number.

**Functional Mode#**
One of the following values:

- **1** - HBA Mode
- **2** - RAID: Hide RAW
- **3** - Mixed

**nologs**
Suppresses log output.
**Examples**

```
ARCCONF SETCONNECTORMODE 1 1 1
ARCCONF SETCONNECTORMODE 1 3 3
```

### 2.35 arccconf setcontrollermode

**Description**

Use this command to configure the controller operating mode for all connectors:

- **HBA Mode**—Allows the controller to act and be used as a Host Bus Adapter. RAID functions of the controller are disabled. All attached drives are surfaced as RAW devices.
- **RAID: Hide RAW**—All RAID functions of the controller are enabled, but RAW devices are not exposed to the operating system.
- **Mixed**—RAID volumes and RAW drives are exposed to operating system.

**Syntax**

```
ARCCONF SETCONTROLLERMODE <Controller#> <Controller Mode> [nologs]
```

**Parameters**

**Controller Mode**

Change a controller's mode.

- 2 - HBA Mode
- 3 - RAID: Hide RAW
- 5 - Mixed

**Examples**

```
ARCCONF SETCONTROLLERMODE 1 2
```

### 2.36 arccconf setcontrollerparam

**Description**

Changes a parameter of a controller.
Syntax

ARCCONF SETCONTROLLERPARAM <Controller#> QUEUEDEPTH <QDepth> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> SPAREACTIVATIONMODE <Mode> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> ELEVATORSORT <Enable | Disable> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> LATENCY <Latency> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> SANITIZELOCK <sanitizeLock> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> MIXEDVOLUMES <Enable | Disable> [nologs]
USERROLE <userrole> PASSWORD <password> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> FWLOCK <Enable | Disable> USERROLE <userrole> PASSWORD <password> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> OOBINTERFACE <OOBinterface> [nologs]
I2CCLOCKSPEED <i2cClockSpeed> I2CCLOCKSTRETCH <i2cClockStretch> [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> OOBINTERFACE MCTP I2CADDRESS <i2cAddress> [nologs]
SMBUSDEVICETYPE <SMBusDeviceType> SMBUSCHANNEL <SMBusChannel> STATICEID <StaticEID> VDMNOTIFICATION <VDMNotification> [nologs]

ARCCONF SETCONTROLLERPARAM <Controller#> DISCOVERYPROTOCOL <All discoveryProtocol> [noprompt] [nologs]
ARCCONF SETCONTROLLERPARAM <Controller#> DISCOVERYPROTOCOL <Connector# discoveryProtocol> [Connector# discoveryProtocol]... noprompt] [nologs]

ARCCONF SETCONTROLLERPARAM <Controller#> EXPANDERSCANDURATION <duration> [nologs]

Parameters

**Controller#**
Controller number

**QUEUEDEPTH <QDepth>**
Sets the queue depth for the controller. Valid values are 0, 2, 4, 8, 16, and 32. A value of 0 indicates automatic queue depth.

**SPAREACTIVATIONMODE <mode>**
Sets the spare activation mode from activation on failure to predictive spare activation. Valid values are:
- 0: Activate on failure (default)
- 1: Activate on predictive failure

**ELEVATORSORT**
Sets the behavior of the controller cache write Elevator sort algorithm.

**LATENCY**
Sets the flexible latency scheduler. Valid values are:
- 0: Disable (default).
- 1: Low. Sets value to 250.
- 2: Medium. Sets value to 100.
- 3: High. Sets value to 50.
- 4: Aggressive level 1. Sets value to 30.
- 5: Aggressive level 2. Sets value to 10.

**SANITIZELOCK**
Sets the Sanitize lock on the controller.
- sanitizeLock
  - None - Default setting
  - Freeze - Freezes the Sanitize operation on all supported drives
- **AntiFreeze** - Blocks setting the Freeze mode on all supported drives. Prevents further attempts to freeze the Sanitize operation on the hard drive.

**MIXEDVOLUMES**
Enables mixing of encrypted and plaintext logical devices. Valid values are:
- **Enable**: Authorized users have the option to create encrypted logical devices or plaintext logical devices (not encrypted).
- **Disable**: New logical devices will be encrypted, with no option to create plaintext logical devices.

**FWLOCK**
Locks/unlocks controller firmware update. Valid values are:
- **Enable**: Authorized users can update the controller firmware.
- **Disable**: Controller firmware cannot be updated.

**USERROLE <userrole> PASSWORD <password>**
`maxCrypto` user-role and password. Valid values are:
- **crypto**: `maxCrypto` administrator
- **user**: standard user

**OOBINTERFACE**
Sets the Out-of-band interface settings for the controller. Parameters for configuring OOB interface:
- **PBSI**
- **MCTP**

**PBSI**
Sets the Out-of-band interface as PBSI.

<table>
<thead>
<tr>
<th>PBSI Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I2CADDRESS</td>
<td>Sets the I2C Address of the controller. Hexadecimal input from range of 0x00—0xFF</td>
</tr>
<tr>
<td>i2CcClockSpeed</td>
<td>Sets I2C clock speed</td>
</tr>
<tr>
<td></td>
<td>• 0: I2C clock speed disable (Default)</td>
</tr>
<tr>
<td></td>
<td>• 2: I2C clock speed 100 kHz</td>
</tr>
<tr>
<td></td>
<td>• 3: I2C clock speed 400 kHz</td>

<tr>
<td>StaticEID</td>
<td>Sets the Static End Point Identifier (EID) Setting</td>
</tr>
<tr>
<td></td>
<td>• Enable: Enables Static EID</td>
</tr>
<tr>
<td></td>
<td>• Disable: Firmware passes EID as 0 (internally) and the bus owner assigns the EID.</td>
</tr>
</tbody>
</table>
### MCTP parameters

<table>
<thead>
<tr>
<th>MCTP parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VDMNotification</td>
<td>Sets the Vendor Defined Message (VDM) discovery notification</td>
</tr>
<tr>
<td></td>
<td>• Enable: Enabling VDM Discovery Notify supports sending discovery notification during a PCI bus re-enumeration. This message is available for use as a common message for enabling an endpoint to announce its presence to the bus owner. This is typically used as a part of the endpoint discovery process when an MCTP device is hot-plugged onto or becomes powered-up on an MCTP bus.</td>
</tr>
<tr>
<td></td>
<td>• Disable: Disables VDM discovery Notification</td>
</tr>
</tbody>
</table>

#### DISABLE

Sets the Out-of-band interface as Disable

#### DISCOVERYPROTOCOL

Sets the protocol of a connector to discover the connected backplane. Available connector discovery protocols are: UBM and SGPIO.

- **All**: Sets the discovery protocol for all the connectors
- **DiscoveryProtocol**:
  - **UBM**: The controller uses the UBM protocol to communicate with the backplane attached to the connector.
  - **SGPIO**: The controller uses SGPIO to communicate with the backplane attached to the connector.

#### EXPANDERSCAN DURATION

Expander Minimum Scan Duration: Controller waits for the specified seconds to scans/discover the drives attached to the expander on the next power cycle. Set this to a non-zero value if some devices do not appear in the topology after controller boot or rescan requests.

- **duration**: Time duration a controller will wait for during expander discovery. Time duration should be in seconds.

#### RESET

Resets the Out-of-band interface

### Examples

```
ARCCONF SETCONTROLLERPARAM 1 SANITIZELOCK Freeze
ARCCONF SETCONTROLLERPARAM 1 MIXEDVOLUMES enable USERROLE crypto PASSWORD Abc@1234
ARCCONF SETCONTROLLERPARAM 1 FWLOCK enable USERROLE crypto PASSWORD Abc@1234
ARCCONF SETCONTROLLERPARAM 1 OOBINTERFACE Disable
ARCCONF SETCONTROLLERPARAM 1 OOBINTERFACE PBSI I2CAddress 0xD0 I2CCLOCKSPEED 3
I2CCLOCKSTRETCH Enable
ARCCONF SETCONTROLLERPARAM 1 OOBINTERFACE MCTP I2CAddress 0xD0 SMBUSDEVICETYPE 1
SMBUSCHANNEL Enable STATICEID Enable VDMNotification Enable
ARCCONF SETCONTROLLERPARAM 1 OOBINTERFACE Reset
ARCCONF SETCONTROLLERPARAM 1 DISCOVERYPROTOCOL ALL UBM
ARCCONF SETCONTROLLERPARAM 1 DISCOVERYPROTOCOL 0 SGPIO 1 UBM 2 SGPIO
ARCCONF SETCONTROLLERPARAM 1 EXPANDERSCAN DURATION 5
```

### 2.37 arcconf setmaxcache

**Description**

Updates the maxCache write cache policy for one or more logical drives.
Syntax: Write Caching

ARCCONF SETMAXCACHE <Controller#> LOGICALDRIVE <LD#> [LD#..] MAXCACHEWRITEPOLICY <Policy> [nologs]

Parameters

Controller#

The controller number.

LogicalDrive#

The number of the logical drive. You can specify one or more logical drives.

MAXCACHEWRITEPOLICY

Changes the MaxCache Write Cache policy on the logical device.

- Policy - MaxCache Write Cache Policy
- WB - Write Back Cache Policy
- WT - Write Through Policy

Examples

ARCCONF SETMAXCACHE 1 LOGICALDRIVE 0 MAXCACHEWRITEPOLICY wt

2.38 arccconf setname

Description

Renames a logical drive.

Syntax

ARCCONF SETNAME <Controller#> LOGICALDRIVE <LogicalDrive#> <New Name> [nologs]

Parameters

Controller#

Controller number

LogicalDrive#

The number of the logical drive to be renamed

New Name

The new name of the logical drive, and must be of 1 to 64 characters long, using only ASCII characters.

Examples

ARCCONF SETNAME 1 LOGICALDRIVE 1 BACKUP_A
2.39  arcconf setperform

Description
Changes controller settings based on the application type.

Syntax

ARCCONF SETPERFORM <Controller#> MNPDELAY <Delay> [nologs]
ARCCONF SETPERFORM <Controller#> DPO <Enable | Disable> [nologs]

Parameters

Controller#  The controller number
MNPDELAY <Delay>  Sets the monitor and performance delay for the controller, in seconds. Default is 60 minutes (3600 seconds).
DPO  Enables or disables the degraded performance setting for the controller. Default is disabled.

Examples

ARCCONF SETPERFORM 1 MNPDELAY 1800
ARCCONF SETPERFORM 1 DPO enable

2.40  arcconf setpower

Description
Modifies the power management settings.

Syntax

ARCCONF SETPOWER <Controller#> POWERMODE <mode> SURVIVALMODE <mode> [nologs]

Parameters

Controller#  The controller number.
POWERMODE  Specifies the power mode for the controller.

- 1: Minimum power-Set static settings to lowest possible values and reduce power dynamically based on workload.
- 2: Balanced power-Set static settings based on configuration and reduce power dynamically based on workload.
- 3: Maximum performance-Set static settings to highest possible values and do not reduce power dynamically.
SURVIVALMODE

Survival mode allows the controller to throttle back dynamic power settings to their minimum when
temperatures exceed the warning threshold.

This allows the server to continue running in more situations, but performance may decrease.

• Enable-Survival mode enabled.
• Disable-Survival mode disabled.

Examples

ARCCONF SETPOWER 1 POWERMODE 2
ARCCONF SETPOWER 1 SURVIVALMODE 1

2.41 arcconf setpriority

Description

Changes a task's execution priority or a controller's global background task priority.

Syntax

ARCCONF SETPRIORITY <Controller#> <REBUILD|EXPAND> <New Priority> [nologs]

Parameters

Controller#
The controller number

New Priority
LOW, MEDIUM, or HIGH. For REBUILD only: MEDIUMHIGH (if rapid rebuild priority is supported on the controller).

REBUILD
Sets the controller's rebuild priority.

EXPAND
Sets the controller's capacity expansion (OCE) priority.

Examples

ARCCONF SETPRIORITY 1 EXPAND LOW
SETPRIORITY 1 REBUILD MEDIUM

2.42 arcconf setstate

Description

Changes the state of a physical device or logical device or maxcache from its current state to the designated state.
Syntax

ARCCONF SETSTATE <Controller#> DEVICE <Channel#> <Device#> <State> [ARRAY <AR#> [AR#] ... ] [SPARETYPE <TYPE>] [noprompt] [nologs]
ARCCONF SETSTATE <Controller#> LOGICALDRIVE <LD#> OPTIMAL [ADVANCED <option>] [noprompt] [nologs]
ARCCONF SETSTATE <Controller#> MAXCACHE <LD#> OPTIMAL [noprompt] [nologs]

Parameters

Controller#
The controller number
Channel#
The channel number for the drive.
Device#
Device number for the device.
LD#
Logical drive number.
AR#
Array number.
State
- HSP—Create a hot spare from a ready drive. Dedicates the HSP to one or more.
- RDY—Remove a hot spare designation. Attempts to change a drive from Failed to Ready.
- DDD—Force a drive offline (to Failed).
- EED—Enable the erased drive.
MAXCACHE(Optional keyword for maxCache devices only. Include if State is HSP or RDY, and the hot spare is for a maxCache device.)
- maxCache ld#—maxCache logical device ID to be forced optimal.
- Type
  - 1: Dedicated—A dedicated spare temporarily takes over for a failed drive and can be shared between arrays.
  - 2: Autoreplace—An autoreplace spare replaces a failed drive and cannot be shared between arrays.
SPARETYPE
Sets the sparetype for the array.

Noprompt:
No prompt for confirmation.

Examples

ARCCONF SETSTATE 1 LOGICALDRIVE 1 OPTIMAL
ARCCONF SETSTATE 1 DEVICE 0 0 DDD
ARCCONF SETSTATE 1 DEVICE 0 0 RDY
ARCCONF SETSTATE 1 DEVICE 0 0 HSP ARRAY 0
ARCCONF SETSTATE 1 MAXCACHE 0 OPTIMAL
### 2.43 arconf setstatsdatacollection

**Description**

Enables or disables statistics collection for a controller. To display the statistics, see `arconf getlogs` on page 13.

**Syntax**

```
ARCCONF SETSTATSDATACOLLECTION <Controller#> Enable|Disable [nologs]
```

**Parameters**

- **Controller#**
  - The controller number
- **Enable**
  - Turns statistics collection on.
- **Disable**
  - Turns statistics collection off.

**Examples**

```
ARCCONF SETSTATSDATACOLLECTION 1 ENABLE
```

### 2.44 arconf slotconfig

**Description**

Lists the channel ID and device ID of the devices in each slot of an enclosure. A slot with no devices marked as EMPTY.

**Syntax**

```
ARCCONF SLOTCONFIG <Controller#> <EnclosureID#> <Slot#> [nologs]
ARCCONF SLOTCONFIG <Controller#> <EnclosureID#> MAP [nologs]
```

**Parameters**

- **Controller#**
  - The controller for which slot configuration is required.
- **EnclosureID#**
  - The enclosure where slot configuration is required.
- **Slot#**
  - The slot number of the drive where information is required.
- **MAP**
  - Display the slot configuration of an enclosure.
Examples

ARCCONF SLOTCONFIG 1 0 2 2
ARCCONF SLOTCONFIG 1 CN0 1 0
ARCCONF SLOTCONFIG 1 CN0 2 MAP
ARCCONF SLOTCONFIG 1 ALL MAP

2.45  arcconf smp

Description

Sends a SAS Management Protocol (SMP) function request to a SMP target device.

Syntax:

ARCCONF SMP <Controller#> Enclosure <Connector# Channel# Device#> Expander <Expander#> <CommandType1> [ASCII] [nologs]
ARCCONF SMP <Controller#> Enclosure <Connector# Channel# Device#> Expander <Expander#> <CommandType2> PHY <PHY#> [ASCII] [nologs]

Parameters

Controller#
Controller number.

Connector# Channel# ID#
Connector ID, Channel ID and Device ID of the enclosure that contains the expander.

Expander#
Expander number on the controller (SMP target device).

PHY#
The PHY Identifier (valid only for for Discover and PHY Error Log Request).

CommandType#

CommandType1:
- RGR - Report General Request
- RMR - Report Manufacturer Request

CommandType2:
- DR - Discover Request
- RPELR - Report PHY Error Log Request

ASCII
Displays the SMP response in ASCII format along with Hex formatted output.

Examples

ARCCONF SMP 1 Enclosure 1 2 0 Expander 0 RGR
ARCCONF SMP 1 Enclosure 1 2 0 Expander 1 DR 0
2.46 arcconf splitmirror

Description

Splits an array consisting of one or more RAID 1, RAID 10, RAID 1(ADM) or RAID10(ADM) logical devices into two new arrays with identical contents.

Syntax

ARCCONF SPLITMIRROR <Controller#> ARRAY <Array#> SPLITWITHBACKUP [nologs]
ARCCONF SPLITMIRROR <Controller#> ARRAY <Array#> REMIRROR [nologs]
ARCCONF SPLITMIRROR <Controller#> ARRAY <Array#> ROLLBACK [nologs]
ARCCONF SPLITMIRROR <Controller#> ARRAY <Array#> ACTIVATEBACKUP [nologs]

Parameters

Controller#
Controller number

Array#
Array number

SPLITWITHBACKUP
Splits the array into two new arrays: a primary array and a backup array, with the following characteristics:
- If the original array contained RAID 1 or RAID 10 drives, the primary array will contain RAID 0 drives.
- If the original array contained RAID 1(ADM) drives, the primary array will contain RAID 1 drives.
- If the original array contained RAID 10 (ADM) drives, the primary array will contain RAID 1+0 drives.

The backup array always contains RAID 0 logical drives. The primary array continues to be fully accessible to the operating system while the backup array is hidden from the operating system.

REMIRROR
Remirrors the array by preserving the existing data and discarding the backup array. This option re-creates the original mirrored array with the contents of the primary array.

ROLLBACK
Remirrors the array by rolling back to the contents of the backup array and discarding existing data. This option re-creates the mirrored array but restores its contents to the point in time when the backup array was created.

Caution: We do not recommend using this option while the array is online, or while the logical drive to be rolled back is mounted or in use by the operating system.

ACTIVATEBACKUP
Activates the backup array and makes it fully accessible to the operating system.

Examples

ARCCONF SPLITMIRROR 1 ARRAY 0 SPLITWITHBACKUP
ARCCONF SPLITMIRROR 1 ARRAY 0 REMIRROR
ARCCONF SPLITMIRROR 1 ARRAY 0 ROLLBACK
ARCCONF SPLITMIRROR 1 ARRAY 0 ACTIVATEBACKUP
2.47 arcconf task

Description

Performs a task on a logical drive, physical drive, array, or maxCache logical device. Uninitializes physical drives on a controller. Erases an encrypted logical drive or array, encodes (encrypts) a plaintext logical drive, and creates a new key for an encrypted logical device.

Syntax:

ARCCONF TASK
ARCCONF TASK START <Controller#> DEVICE <Channel# ID#> <task> [PATTERN <erasePattern>] [noprompt] [nologs]
ARCCONF TASK START <Controller#> DEVICE ALL UNINITIALIZE [nologs]
ARCCONF TASK STOP  <Controller#> DEVICE <Channel#> <ID#> [nologs]

Syntax: maxCrypto Usage

ARCCONF TASK
ARCCONF TASK START <Controller#> LOGICALDRIVE <LogicalDrive#> CRYPTOERASE USERROLE <userrole> PASSWORD <password>
ARCCONF TASK START <Controller#> ARRAY <Array#> CRYPTOERASE USERROLE <userrole> PASSWORD <password>
ARCCONF TASK START <Controller#> LOGICALDRIVE <LogicalDrive#> ENCODE DATA <Preserve | Discard> USERROLE <userrole> PASSWORD <password>
ARCCONF TASK START <Controller#> LOGICALDRIVE <LogicalDrive#> REKEY USERROLE <userrole> PASSWORD <password>
ARCCONF TASK START <Controller#> ARRAY <Array#> REKEY USERROLE <userrole> PASSWORD <password>

Parameters

Controller#
The controller number
Channel# ID#
Channel number and device ID for the device

Options:

- Physical device options:
  - secureerase [password] [PATTERN <pattern>]|—removes all data from the drive in a secure fashion to prevent any possible recovery of the erased data. Erase patterns:
    - 1: Zero - Initializes all blocks to zero.
    - 2: Random Zero - This erase method writes random data on the drive for the first pass then writes zeros for the second pass.
    - 3: Random Random Zero - This erase method writes random data on the drive for the first and second passes and then zeros for the third pass.
    - 4: Reserved.
    - 5: Block Erase Sanitize Method - SSDs only. Erase voltage is applied to all NAND cells.
    - 6: Overwrite Sanitize Method - HDDs only. Initializes blocks using complex multi-byte data pattern.
  - Unrestricted—With the Sanitize Erase option, the physical device is available for configuration if sanitize erase fails or could not complete. If not provided, value defaults to 'Restricted'. With the default option, if Sanitize Erase fails, the only operation allowed is to start another sanitize.
  - UNINITIALIZE—When specified with ALL, clears meta-data and any OS partitions from all drives on the controller; existing data on the drive is destroyed.
Cryptoerase
   Erases an encrypted logical drive or array. (After erasing, the logical device remains encrypted.)

Encode Data <Preserve | Discard>
   Encrypts a logical drive or array, with option of preserving or discarding the original data.

Rekey
   Generates a new key for encrypted devices.

USERROLE <userrole> PASSWORD <password>
   maxCrypto user-role and password. Valid values are:
   • crypto (maxCrypto administrator)
   • user (standard user)

Examples

ARCCONF TASK START 1 DEVICE 0 0 SECUREERASE PATTERN 1
ARCCONF TASK STOP 1 DEVICE 0 0
ARCCONF TASK START 1 DEVICE ALL UNINITIALIZE
ARCCONF TASK START 1 LOGICALDRIVE 0 CRYPTOERASE USERROLE crypto password Abc@1234
ARCCONF TASK START 1 LOGICALDRIVE 0 ENCODE DATA preserve USERROLE crypto password Abc@1234
ARCCONF TASK START 1 ARRAY 0 REKEY USERROLE crypto password Abc@1234

2.48 arcconf uninit

Description

Uninitializes one or more physical drives. The uninitialize command clears meta-data and any OS partitions from a drive; existing data on the drive is destroyed.
   
   Note: Uninitialized drives are compatible with any HBA and can be exchanged with drives on the motherboard's SATA interface.

Syntax:

ARCCONF UNINIT <Controller#> <Channel# Drive#> [Channel# Drive#] ... [nologs]
ARCCONF UNINIT <Controller#> ALL [nologs]

Parameters

Controller#
   Controller number.

Channel#
   The channel number of the device to be uninitialized.

Drive#
   The drive number of the device to be uninitialized.

ALL
   Uninitializes all physical devices on the controller.

nologs
   Suppresses log output for the command.
Examples

ARCCONF UNINIT 1 0 12 0 13
ARCCONF UNINIT 1 ALL
A  Running ARCCONF in the UEFI Shell

This appendix describes how to run ARCCONF in the UEFI shell. UEFI/ARCCONF supports a subset of commands available on the command line. Most commands have the same form and syntax as their command line counterparts, with the exceptions noted below in *UEFI/ARCCONF Commands* on page 48. Additionally, some commands are supported in UEFI/ARCCONF only.

**Prerequisites**

To run UEFI/ACCONF, ensure that your system meets these requirements:

- System is running UEFI Shell v2.2 or higher
- MSCC UEFI driver is installed:
  1. Boot the machine to the UEFI shell prompt.
  2. Type: `drivers`
  3. Verify that 'MSCC UEFI Driver (version)' is listed.

**Starting UEFI/ARCCONF**

To start UEFI/ARCCONF:

1. Boot the machine to the UEFI shell prompt.
2. At the prompt, enter a command in the form:

   `arcconf <command_name> <parameters> ...`

3. To see a list of supported commands, type `ARCCONF` at the prompt; to include pagebreaks, type `ARCCONF -b`. For help with a specific command, type `ARCCONF <command_name> help`.

**UEFI/ARCCONF Commands**

The table below lists the commands supported in UEFI/ARCCONF. Follow the link in the *Usage* column for command forms and syntax. Where syntax differs from the command line, a separate usage statement is listed.

**Table 4 • UEFI/ARCCONF Commands**

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elevator Sort</td>
<td>This option controls the behavior of the controller cache write elevator sort algorithm. This option is used to tune controller performance for video applications. The possible options are Enable or Disable.</td>
</tr>
<tr>
<td>Degraded Mode Performance Optimization</td>
<td>Degraded Mode Performance Optimization setting applies to RAID 5 logical devices in Degraded mode only. Enabling this setting directs the controller to improve performance of large read requests by buffering physical drive requests. Disabling this feature forces the controller to read from the same drives multiple times. This option is used to tune controller performance for video applications. The possible options are Enable or Disable.</td>
</tr>
<tr>
<td>Latency</td>
<td>Latency describes Flexible Latency Schedule (FLS) setting. Flexible Latency Scheduler (FLS) is a controller option where the controller can re-prioritize I/O requests to prevent some requests to HDDs from timing out. Under normal operation (when FLS is disabled, or in controllers that don't support FLS), the controller will sort incoming requests in order to minimize the amount of travel for the HDD read heads. This strategy works well for workloads that access sequential data, or workloads that require multiple requests from localized sectors in the drive. For highly random workloads, such as transaction processing, some requests will end up on the wrong side of the disk platter and, due to their high latency, will be marked as timed out. When FLS is enabled, it will detect these high-latency requests and apply a cut-off value, after which it will suspend elevator sorting and service the request right away.</td>
</tr>
<tr>
<td>Post Prompt Timeout</td>
<td>Post prompt timeout describes the F1/F2 POST prompt timeout for the controller during system boot.</td>
</tr>
<tr>
<td>Statistics Data Collection Mode</td>
<td>Use the Statistics Viewer to view the advanced statistics for the controllers, hard drives, SSDs, logical drives, and maxCache devices in your storage space, including virtual volumes and the maxCache container.</td>
</tr>
<tr>
<td>Boot Controller</td>
<td>Boot controller can be changed only in the offline environment and only applies to booting in Legacy BIOS Boot mode. The boot controller is the first controller that the system examines (after power up) to find a bootable logical device or a physical device. The controller boots from the first local drive by default. It is recommended that leaving the default setting disabled to prevent an error when booting after replacing the boot volume or controller.</td>
</tr>
<tr>
<td>Primary Boot Volume</td>
<td>Describes which logical device or physical device is the primary boot volume on the current controller.</td>
</tr>
<tr>
<td>Secondary Boot Volume</td>
<td>Describes which logical device or physical device is the secondary boot volume on the current controller.</td>
</tr>
<tr>
<td>Driver Name</td>
<td>Driver name describes the name of the driver.</td>
</tr>
<tr>
<td>Driver Supports SSD I/O Bypass</td>
<td>Driver supports SSD I/O Bypass describes whether the driver supports the SSD I/O Bypass feature.</td>
</tr>
<tr>
<td>Manufacturing Part Number</td>
<td>Describes the hardware part number information about the controller.</td>
</tr>
<tr>
<td>Manufacturing Spare Part Number</td>
<td>Describes the hardware spare part number information about the controller.</td>
</tr>
<tr>
<td>Manufacturing Wellness Log</td>
<td>Describes the hardware wellness log information about the controller.</td>
</tr>
<tr>
<td>NVRAM Checksum Status</td>
<td>Describes the NVRAM Checksum status.</td>
</tr>
<tr>
<td>Sanitize Lock Setting</td>
<td>Set the sanitize lock policy of the controller. This policy will be applied to all SATA physical devices that support the feature. 1. None: No freeze lock or anti-freeze lock commands are sent to any physical device. 2. Freeze: Supported physical devices are freeze locked and sanitize is not allowed.</td>
</tr>

Microsemi Proprietary and Confidential Adaptec Smart Storage Controllers User's Guide Revision 9.0
<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3. Anti-Freeze: Supported physical devices are</td>
<td>Anti-Freeze: Supported physical devices are anti-freeze locked and freezing the physical devices is not allowed.</td>
</tr>
<tr>
<td>locked and freezing the physical devices is</td>
<td></td>
</tr>
<tr>
<td>not allowed.</td>
<td></td>
</tr>
<tr>
<td>Pending Sanitize Lock Setting</td>
<td>Sanitize lock is in pending state, reboot the system and requires all physical devices to be power cycled or hot-plugged for the lock state to</td>
</tr>
<tr>
<td></td>
<td>be applied to the physical devices.</td>
</tr>
<tr>
<td>Verify Write Setting</td>
<td>Verify write operation helps to ensure data is written to the disk’s media and is verified for correctness immediately. Most importantly, the</td>
</tr>
<tr>
<td></td>
<td>verification process helps to detect any unrecoverable error right away.</td>
</tr>
<tr>
<td>Current Power Mode</td>
<td>Power mode setting that determines controller static settings based on workload</td>
</tr>
<tr>
<td>Pending Power Mode</td>
<td>This setting determines controller static settings based on workload to be applied after reboot.</td>
</tr>
<tr>
<td>Survival Mode</td>
<td>Enabling survival mode will allow the controller to throttle back dynamic power settings to their minimum when temperature exceeds the warning threshold. This allows the server to continue running in more situations, but performance may decrease.</td>
</tr>
<tr>
<td>I2C Address</td>
<td>I2C address describes the Inter-Integrated Circuit(I2C) slave address.</td>
</tr>
<tr>
<td>I2C Clock Speed</td>
<td>I2C clock speed describes the Inter-Integrated Circuit(I2C) clock speed.</td>
</tr>
<tr>
<td>I2C Clock Streching</td>
<td>I2C stretching status describes the Inter-Integrated Circuit(I2C) clock status.</td>
</tr>
<tr>
<td>Cache Status</td>
<td>Determines the preservation status of the cache module.</td>
</tr>
<tr>
<td>Cache Serial Number</td>
<td>A unique number assigned to the cache module.</td>
</tr>
<tr>
<td>Cache memory</td>
<td>Cache memory size in the controller</td>
</tr>
<tr>
<td>Cache Ratio</td>
<td>The controller cache ratio setting determines the controller ability to adjust the amount of memory for read-ahead cache versus write cache</td>
</tr>
<tr>
<td>No-Battery Write Cache</td>
<td>This setting decides the controller to enable write cache when no battery is present or when the battery fails. Values are Enable or Disable.</td>
</tr>
<tr>
<td>Wait for Cache Room</td>
<td>This setting causes the controller to always wait for room in the read/write cache when full, instead of automatically bypassing it in favor of higher performance</td>
</tr>
<tr>
<td>Write Cache Bypass Threshold Size</td>
<td>All writes larger than the specified value will bypass the write cache and be written directly to the disk for non-parity RAID volumes.</td>
</tr>
<tr>
<td>Global Physical Device Write Cache Policy</td>
<td>Global Physical Devices Write Cache Policy describes the write cache policy for all physical drives on a controller. The physical device write caching can be enable or disable on all drives on the controller.</td>
</tr>
<tr>
<td>Configured Drives</td>
<td>This option allows to configure the write cache policy on a controller. Setting to default allows the controller to optimize the drive write cache policy of those drives. Enabling drive write cache can increase write performance but risks losing the data in the cache on sudden power loss.</td>
</tr>
<tr>
<td>Unconfigured Drives</td>
<td>This option allows to configure the write cache policy on a controller. Setting to default for unconfigured drives uses the drive's existing write cache policy. Enabling drive write cache can increase write performance but risks losing the data in the cache on sudden power loss.</td>
</tr>
</tbody>
</table>
### Properties

<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HBA Drives</td>
<td>This option allows to configure the write cache policy on a controller. Setting to default uses the drive's existing write cache policy. Enabling drive write cache can increase write performance but risks losing the data in the cache on sudden power loss.</td>
</tr>
<tr>
<td>maxCache Version</td>
<td>maxCache version of controller</td>
</tr>
<tr>
<td>maxCache RAID5 WriteBack Enabled</td>
<td>Status of write back setting for RAID5 maxCache at controller level.</td>
</tr>
<tr>
<td>Logical devices/Failed/Degraded</td>
<td>Total number of logical devices/number of logical devices failed/number of logical devices failed.</td>
</tr>
<tr>
<td>Copyback</td>
<td>When a logical drive is rebuilt using a hot spare, data from the failed drive is transferred to the hot spare. When copyback is enabled, data is moved back to its original location once the controller detects that the failed drive has been replaced. Once the data is copied back, the hot spare becomes available again.</td>
</tr>
<tr>
<td>Spare Activation Mode</td>
<td>Spare activation mode feature enables the controller firmware to activate a spare drive. The firmware starts rebuilding a spare drive only when a data drive fails when the mode is Failure. With the predictive failure activation mode, rebuilding can begin before the drive fails when a data drive reports a predictive failure (SMART) status which will reduce the likelihood of data loss that could occur if an additional drive fails.</td>
</tr>
<tr>
<td>Background consistency check</td>
<td>If your controller supports background consistency check, maxView Storage Manager continually and automatically checks your logical drives for bad or inconsistent data once they're in use.</td>
</tr>
<tr>
<td>Background consistency check period</td>
<td>RAID Consistency Check Period in days</td>
</tr>
<tr>
<td>Consistency Check Delay</td>
<td>Determines the time interval for which a controller must be inactive before a consistency check is initiated on the physical drives that are connected to it. The value can be between 0 and 30 to specify the duration of the delay in seconds. A value of 0 disables the scan.</td>
</tr>
<tr>
<td>Parallel Consistency Check Supported</td>
<td>Status of the Parallel Consistency Check support</td>
</tr>
<tr>
<td>Parallel Consistency Check Count</td>
<td>Parallel consistency check count describes the number of logical devices on which the controller will perform consistency check in parallel.</td>
</tr>
<tr>
<td>Inconsistency Repair Policy</td>
<td>Inconsistency repair policy searches for a single inconsistent strip and repairs the strip on that one drive only</td>
</tr>
<tr>
<td>Consistency Check Inconsistency Notify</td>
<td>This property enables the event notification messages and serial debug log messages for mirrored volumes</td>
</tr>
<tr>
<td>Rebuild Priority</td>
<td>Rebuild priority determines the urgency with which the controller treats an internal command to rebuild a failed logical drive. At the low setting, normal system operations take priority over a rebuild. At the medium setting, rebuilding occurs for half of the time, and normal system operations occur for the rest of the time. At the medium high setting, rebuilding is given a higher priority over normal system operations. At the high setting, the rebuild takes precedence over all other system operations.</td>
</tr>
<tr>
<td>Expand Priority</td>
<td>Determines the urgency with which the controller treats an internal command to expand an array. At the low setting level, normal system operations take priority over an array expansion. At the medium setting, expansion occurs for half of the time, and normal system operations occur for the rest of the time. At the high setting, the expansion takes precedence over all other system operations.</td>
</tr>

<tr>
<td>Number of maxCrypto Data Logical devices</td>
<td>Total number of encrypted logical device</td>
</tr>
<tr>
<td>Number of maxCrypto Foreign Logical devices without key</td>
<td>Encrypted Foreign Logical Device Count, Total number of encrypted foreign logical device</td>
</tr>
<tr>
<td>Number of maxCrypto Logical devices with maxCrypto off</td>
<td>Total number of logical devices without maxCrypto</td>
</tr>
<tr>
<td>Firmware Supports Online Firmware Activation</td>
<td>Determines whether firmware supports online firmware activation (OFA) feature</td>
</tr>
<tr>
<td>Driver Supports Online Firmware Activation</td>
<td>Determines whether driver supports OFA</td>
</tr>
<tr>
<td>OFA Status</td>
<td>Represents the status of OFA</td>
</tr>
<tr>
<td>Delay Time Remaining</td>
<td>Determines the delay in minutes for OFA to initiate</td>
</tr>
</tbody>
</table>
### Controller, Array, Logical and Physical Device Properties

<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percentage Complete</td>
<td>Determines the percentage of completion of OFA</td>
</tr>
<tr>
<td>Sensor ID</td>
<td>ID describes unique sensor identifier within the controller</td>
</tr>
<tr>
<td>Current Value</td>
<td>Current temperature of the specific sensor</td>
</tr>
<tr>
<td>Max Value Since Powered On</td>
<td>Maximum temperature of the specific sensor after being powered on the controller</td>
</tr>
<tr>
<td>Location</td>
<td>Location of the specific sensor on the controller</td>
</tr>
</tbody>
</table>

### Table 6 • Array

<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Array Number</td>
<td>ID describes unique array identifier within the controller</td>
</tr>
<tr>
<td>Status</td>
<td>Status of array is based on health of the member disk drives</td>
</tr>
<tr>
<td>Name</td>
<td>Name describes unique name of an array</td>
</tr>
<tr>
<td>Transformation Status</td>
<td>Transformation status indicates whether the array is transforming or not</td>
</tr>
<tr>
<td>Interface</td>
<td>Disk drives that are the member of array can have interface type such SAS, SATA, SAS S-SD, and SATA SSD. The interface type of array is based on the member disk drives interface type.</td>
</tr>
<tr>
<td>Total size</td>
<td>Total usable size is the total space available in the array for creating logical device</td>
</tr>
<tr>
<td>Unused Size</td>
<td>Unused size is the free space available to create new logical device to store the data</td>
</tr>
<tr>
<td>Block size</td>
<td>Block size indicates the maximum size of data block on disk drives that are member of an array (can be 512 Bytes or 4K)</td>
</tr>
<tr>
<td>Array Utilization</td>
<td>Total space utilization of an array</td>
</tr>
<tr>
<td>Type</td>
<td>Describes the type of the array such as data array, backup array, and so on</td>
</tr>
</tbody>
</table>

#### Associated Split Mirror Array

<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spare Rebuild Mode</td>
<td>Spare Rebuild mode describes the spare type for the array. It can be &quot;dedicated&quot; or &quot;auto replace&quot; if the array is valid</td>
</tr>
<tr>
<td>SSD I/O Bypass</td>
<td>SSD I/O Bypass enables an optimized data path to high performance solid state drives. The optimized path bypasses the controllers RAID processing components and sends I/O directly to the drives.</td>
</tr>
</tbody>
</table>

### Table 7 • Logical Device

<table>
<thead>
<tr>
<th>Properties</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logical Device Number</td>
<td>ID describes unique logical device identifier within the controller.</td>
</tr>
<tr>
<td>Logical Device Name</td>
<td>Logical device name can be of maximum 64 characters and it should contain only ASCII characters</td>
</tr>
<tr>
<td>Disk Name</td>
<td>Name of the logical disk drive</td>
</tr>
<tr>
<td>Properties</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Block Size of member drives</td>
<td>Maximum size of data block on disk drives which are RAID member of logical device (can be 512 Bytes or 4K).</td>
</tr>
<tr>
<td>Array</td>
<td>Identifier of the Array on which the logical device.</td>
</tr>
<tr>
<td>RAID level</td>
<td>RAID level on which the logical device has been created.</td>
</tr>
<tr>
<td>Unique Identifier</td>
<td>The logical device unique identifier.</td>
</tr>
<tr>
<td>Status of Logical Device</td>
<td>Status of logical device based on health of RAID members of logical device.</td>
</tr>
<tr>
<td>maxCache state</td>
<td>State of the associated maxCache logical device.</td>
</tr>
<tr>
<td>Additional details</td>
<td>Describes the way of logical drive creation.</td>
</tr>
<tr>
<td>Parity Initialization Status</td>
<td>RPI status of this logical device</td>
</tr>
<tr>
<td>maxCache Status</td>
<td>Status of maxCache.</td>
</tr>
<tr>
<td>Size</td>
<td>Logical drive size</td>
</tr>
<tr>
<td>Parity Space</td>
<td>the parity space of the logical device</td>
</tr>
<tr>
<td>Stripe-unit size</td>
<td>Stripe size is the amount of data (in KB) written to one disk drive, before moving to the next disk drive in the logical device. Stripe size options vary, depending on your controller and RAID level.</td>
</tr>
<tr>
<td>Full Stripe Size</td>
<td>Full stripe size refers to the combined size of all the strips across all physical drives, excluding parity-only drives.</td>
</tr>
<tr>
<td>Cache Line Size</td>
<td>Specifies the cache line size(KB)</td>
</tr>
<tr>
<td>Interface Type</td>
<td>Disk drives which are the member of logical can have interface type such SAS, SATA, SAS SSD and SATA SSD.</td>
</tr>
<tr>
<td>Device Type</td>
<td>Indicates logical drive is of type data or cache</td>
</tr>
<tr>
<td>Bootable</td>
<td>Specifies logical drive bootable type</td>
</tr>
<tr>
<td>Failed stripes</td>
<td>Displays true if bad blocks on logical drive exists</td>
</tr>
<tr>
<td>Failed stripe count</td>
<td>Shows total bad blocks on logical drive</td>
</tr>
<tr>
<td>Protected by Hot Spare</td>
<td>Indicates whether the logical device is protected by Hot Spare.</td>
</tr>
<tr>
<td>Heads</td>
<td>Indicates the pre-defined space set aside for RAID redundant information on a logical device.</td>
</tr>
<tr>
<td>Sectors Per Track</td>
<td>Specifies the number of sectors that are to comprise each track</td>
</tr>
<tr>
<td>Cylinders</td>
<td>Indicates the set of all tracks having equal diameter in a logical device</td>
</tr>
<tr>
<td>Caching</td>
<td>Indicates the setting of cache used for this logical device.</td>
</tr>
<tr>
<td>Mount Points</td>
<td>Describes the operating system device names of the logical device.</td>
</tr>
<tr>
<td>Associated Logical Id</td>
<td>Associated logical device Id for maxCache</td>
</tr>
</tbody>
</table>
### Controller, Array, Logical and Physical Device Properties

<table>
